## About This Report

This is the first report of a multi-part series based on a national survey of 10,013 adults nationwide, conducted January 23-March 16, 2014 by the Pew Research Center. The survey, funded in part through grants from the William and Flora Hewlett Foundation, the John D. and Catherine T. MacArthur Foundation and supported by the generosity of Don C. and Jeane M. Bertsch, is aimed at understanding the nature and scope of political polarization in the American public, and how it interrelates with government, society and people's personal lives.

## Principal Researchers

## Acknowledgements

Colleagues from across the Pew Research Center contributed greatly to the development and execution of this research series. We would especially like to thank Alan Murray, Paul Taylor, Michael Piccorossi, Vidya Krishnamurthy, Claudia Deane, Sara Goo, Bruce Drake, Amy Mitchell, Lee Rainie and Cary Funk for their methodological and editorial contributions. Above all, we want to thank Andy Kohut, our founding director, for his wisdom and guidance, and for building this institution and establishing the rich longitudinal measures upon which this project is based.

This project has benefited greatly from the advice and counsel of many academics, journalists and political practitioners. We invited some of the nation's leading experts on political polarization to visit and discuss the topic with us and reached out to many others for ideas, data, papers and other resources. And many whom we've never met nevertheless influenced us through their published
research on the subject. In that regard, we would especially like to thank: Nancy Belden, Kelly Born, Karlyn Bowman, David Broockman, Jon Cohen, E.J. Dionne, Patrick Egan, William Galston, Craig Gilbert, Ken Goldstein, Gary Jacobson, Jon Lerner, Paul Light, Alex Lundry, Jonathan Nagler, Nathaniel Persily, David Plouffe, Markus Prior, John Sides, Daniel Stid, Joshua Tucker, Steve Waldman and Carol Wilner.

The study also benefited from methodological assistance from staff at Abt SRBI, which collected the data (Charles DiSogra, Courtney Kennedy, Mark Schulman, Chintan Turakhia, Dean Williams), and from Jim Bell, Kyley McGeeney and Steve Schwarzer of the Pew Research Center, and Douglas Steinley of the University of Missouri.

## About Pew Research Center

Pew Research Center is a nonpartisan fact tank that informs the public about the issues, attitudes and trends shaping America and the world. It does not take policy positions. It conducts public opinion polling, demographic research, media content analysis and other empirical social science research. The center studies U.S. politics and policy views; media and journalism; internet and technology; religion and public life; Hispanic trends; global attitudes and U.S. social and demographic trends. All of the center's reports are available at www. pewresearch.org. Pew Research Center is a subsidiary of The Pew Charitable Trusts.

## Overview

Republicans and Democrats are more divided along ideological lines - and partisan antipathy is deeper and more extensive - than at any point in the last two decades. These trends manifest themselves in myriad ways, both in politics and in everyday life. And a new survey of 10,000 adults nationwide finds that these divisions are greatest among those who are the most engaged and active in the political process.

Democrats and Republicans More Ideologically Divided than in the Past
Distribution of Democrats and Republicans on a 10-item scale of political values

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). The blue area in this chart represents the ideological distribution of Democrats; the red area of Republicans. The overlap of these two distributions is shaded purple. Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents (see Appendix B). See the online edition of this report for an animated version of this graphic.

PEW RESEARCH CENTER

The overall share of Americans who express consistently conservative or consistently liberal opinions has doubled over the past two decades from $10 \%$ to $21 \%$. And ideological thinking is now much more closely aligned with partisanship than in the past. As a result, ideological overlap between the two parties has diminished: Today, $92 \%$ of Republicans are to the right of the median Democrat, and $94 \%$ of Democrats are to the left of the median Republican.

Partisan animosity has increased substantially over the same period. In each party, the share with a highly negative view of the opposing party has more than doubled since 1994. Most of these
intense partisans believe the opposing party's policies "are so misguided that they threaten the nation's well-being."

# Beyond Dislike: Viewing the Other Party as a 'Threat to the Nation's Well-Being’ 

# Democratic attitudes about the Republican Party Republican attitudes about the Democratic Party 

Source: 2014 Political Polarization in the American Public
Notes: Questions about whether the Republican and Democratic Parties are a threat to the nation's well being asked only in 2014.
Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents (see Appendix B).
PEW RESEARCH CENTER
"Ideological silos" are now common on both the left and right. People with down-the-line ideological positions - especially conservatives - are more likely than others to say that most of their close friends share their political views. Liberals and conservatives disagree over where they want to live, the kind of people they want to live around and even whom they would welcome into their families.

And at a time of increasing gridlock on Capitol Hill, many on both the left and the right think the outcome of political negotiations between Obama and Republican leaders should be that their side gets more of what it wants.

These sentiments are not shared by all - or even most - Americans. The majority do not have uniformly conservative or liberal views. Most do not see either party as a threat to the nation. And more believe their representatives in government should meet halfway to resolve contentious disputes rather than hold out for more of what they want.

Yet many of those in the center remain on the edges of the political playing field, relatively distant and disengaged, while the most ideologically oriented and politically rancorous Americans make their voices heard through greater participation in every stage of the political process.

The rise of ideological uniformity has been much more pronounced among those who are the most politically active. Today, almost four-in-ten (38\%) politically engaged Democrats are consistent liberals, up from just $8 \%$ in 1994. The change among Republicans since then appears less dramatic $-33 \%$ express consistently conservative views, up from $23 \%$ in the midst of the 1994 "Republican Revolution." But a decade ago, just 10\% of politically engaged Republicans had across-the-board conservative attitudes.

Political Activism Gap: Right and Left More Likely to Vote, Donate to Campaigns

Percent who contributed to a political candidate or group in the past two years

Source: 2014 Political Polarization in the American Public
Note: Bars represent the level of participation at each point on an ideological consistency scale of 10 political values questions. Figures are reported on the five ideological consistency groups used throughout the report (see Appendix A).
PEW RESEARCH CENTER

On measure after measure - whether primary voting, writing letters to officials, volunteering for or donating to a campaign - the most politically polarized are more actively involved in politics, amplifying the voices that are the least willing to see the parties meet each other halfway.

These are among the findings of the largest study of U.S. political attitudes ever undertaken by the Pew Research Center. Data are drawn from a national telephone survey of 10,013 adults, conducted from January through March of this year, and an ongoing series of follow-up surveys. This rich dataset, coupled with trends and insights from two decades of Pew Research Center polling, reveals a complex picture of partisan polarization and how it manifests itself in political behaviors, policy debates, election dynamics and everyday life.

## What Polarization Looks Like

## Growing Minority Holds Consistent Ideological Views

On a 10-item scale of political values, $\%$ who are...

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions. (See Appendix A for details on how the scale is constructed and how scores are grouped.)
PEW RESEARCH CENTER

To chart the progression of ideological thinking, responses to 10 political values questions asked on multiple Pew Research surveys since 1994 have been combined to create a measure of ideological consistency (See Appendix A). Over the past twenty years, the number of Americans in the "tails" of this ideological distribution has doubled from $10 \%$ to $21 \%$. Meanwhile, the center has shrunk: $39 \%$ currently take a roughly equal number of liberal and conservative positions. That is down from about half (49\%) of the public in surveys conducted in 1994 and 2004.

And this shift represents both Democrats moving to the left and Republicans moving to the right, with less and less overlap between the parties. Today, $92 \%$ of Republicans are to the right of the median (middle) Democrat, compared with 64\% twenty years ago. And 94\% of Democrats are to the left of the median Republican, up from $70 \%$ in 1994.

## Republicans Shift to the Right, Democrats to the Left

Distribution of Republicans and Democrats on a 10-item scale of political values

Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents (see Appendix B).

PEW RESEARCH CENTER

## More Negative Views of the Opposing Party

Beyond the rise in ideological consistency, another major element in polarization has been the growing contempt that many Republicans and Democrats have for the opposing party. To be sure, disliking the other party is nothing new in politics. But today, these sentiments are broader and deeper than in the recent past.

In 1994, hardly a time of amicable partisan relations, a majority of Republicans had unfavorable impressions of the Democratic Party, but just $17 \%$ had very unfavorable opinions. Similarly, while most Democrats viewed the GOP unfavorably, just 16\% had very unfavorable views. Since then, highly negative views have more than doubled: $43 \%$ of Republicans and $38 \%$ of Democrats now view the opposite party in strongly negative terms.

A Rising Tide of Mutual Antipathy
Democratic attitudes about the Republican Party 100\%

Republican attitudes about the Democratic Party 100\%

Source: 2014 Political Polarization in the American Public
Note: Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents.
PEW RESEARCH CENTER

Even these numbers tell only part of the story. Those who have a very unfavorable impression of each party were asked: "Would you say the party's policies are so misguided that they threaten the nation's well-being, or wouldn't you go that far?" Most who were asked the question said yes, they would go that far. Among all Democrats, $27 \%$ say the GOP is a threat to the well-being of the country. That figure is even higher among Republicans, $36 \%$ of whom think Democratic policies threaten the nation.

## Politics Gets Personal

Liberals and conservatives share a passion for politics. They are far more likely than those with more mixed ideological views to discuss politics on a weekly or daily basis. But for many, particularly on the right, those conversations may not include much in the way of opposing opinions.

Ideological Echo Chambers

Source: 2014 Political Polarization in the American Public
Note: Ideological consistency based on a scale of 10 political values questions (see Appendix A).
PEW RESEARCH CENTER

Nearly two-thirds ( $63 \%$ ) of consistent conservatives and about half ( $49 \%$ ) of consistent liberals say most of their close friends share their political views. Among those with mixed ideological values, just $25 \%$ say the same. People on the right and left also are more likely to say it is important to them to live in a place where most people share their political views, though again, that desire is more widespread on the right (50\%) than on the left (35\%).

And while few Americans overall go so far as to voice disappointment with the prospect of a family member marrying a Democrat (8\%) or a Republican (9\%), that sentiment is not uncommon on the left or the right. Three-out-of-ten (30\%) consistent conservatives say they would be unhappy if an immediate family member married a Democrat and about a quarter (23\%) of across-the-board liberals say the same about the prospect of a Republican in-law.

To be sure, there are areas of consensus. Most Americans, regardless of their ideological preferences, value communities in which they would live close to extended family and high-quality schools. But far more liberals than conservatives think it is important that a community have racial and ethnic diversity ( $76 \%$ vs. $20 \%$ ). At the same time, conservatives are more likely than liberals to attach importance to living in a place where many people share their religious faith (57\% vs. $17 \%$ of liberals).

Liberals Want Walkable Communities, Conservatives Prefer More Room
Would you prefer to live in a community where...

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). "Don't know" responses not shown.
PEW RESEARCH CENTER

And the differences between right and left go beyond disagreements over politics, friends and neighbors. If they could choose anywhere to live, three-quarters of consistent conservatives prefer a community where "the houses are larger and farther apart, but schools, stores, and restaurants are several miles away." The preferences of consistent liberals are almost the exact inverse, with $77 \%$ saying they'd chose to live where "the houses are smaller and closer to each other, but schools, stores, and restaurants are within walking distance."

## Polarization's Consequences

When they look at a political system in which little seems to get done, most Americans in the center of the electorate think that Obama and Republican leaders should simply meet each other halfway in addressing the issues facing the nation.

## Compromise in the Eye of the Beholder

When Barack Obama and Republican leaders differ over the most important issues facing the country, where should things end up?

Source: 2014 Political Polarization in the American Public
Notes: Question asks respondents where, on a scale of zero to 100, Obama and Republican leaders should end up when addressing the most important issues facing the country. See topline for complete question wording. Ideological consistency based on a scale of 10 political values questions (see Appendix A).
PEW RESEARCH CENTER

Yet an equitable deal is in the eye of the beholder, as both liberals and conservatives define the optimal political outcome as one in which their side gets more of what it wants. A majority of consistent conservatives (57\%) say the ideal agreement between President Obama and congressional Republicans is one in which GOP leaders hold out for more of their goals. Consistent liberals take the opposite view: Their preferred terms (favored by 62\%) end up closer to Obama's position than the GOP's.

## Polarization in Red and Blue

The signs of political polarization are evident on both ends of the political spectrum, though the trajectory, nature and extent differ from left to right.

With Barack Obama in the White House, partisan antipathy is more pronounced among Republicans, especially consistently conservative Republicans. Overall, more Republicans than Democrats see the opposing party's policies as a threat and the differences are even greater when ideology is taken into account. Fully 66\% of consistently conservative Republicans think the Democrats' policies threaten the nation's well-being. By comparison, half (50\%) of consistently liberal Democrats say Republican policies jeopardize the nation's well-being. Conservatives also exhibit more partisan behavior in their personal lives; they are the most likely to have friends and prefer communities of like-minded people.

However, there is as much ideological uniformity on the left as the right. The share of Democrats holding consistently liberal views has grown steadily over the past 20 years, quadrupling from $5 \%$ in 1994 to $23 \%$ today. Social issues like homosexuality and immigration that once drove deep divides within the Democratic Party are now areas of relative consensus. And Democrats have become more uniformly critical of business and more supportive of government.

## More Democrats Take Liberal Positions, More Republicans Take Conservative Positions

Percent of Democrats with political values that are...

Percent of Republicans with political values that are...

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents (see Appendix B).
PEW RESEARCH CENTER

Changes in ideological consistency on the right have followed a different course. In 1994, during the "Republican Revolution," $13 \%$ of Republicans were consistent conservatives. That figure fell to $6 \%$ a decade later during George W. Bush's presidency, before rebounding to $20 \%$ today. This increase has come despite more moderate views among Republicans on issues like homosexuality and immigration, as GOP thinking on issues related to government and the economy has veered sharply to the right.

## About the Study

This is the first report of a multi-part series based on a national survey of 10,013 adults nationwide, conducted January 23-March 16, 2014 by the Pew Research Center. The survey, funded in part through grants from the William and Flora Hewlett Foundation, the John D. and Catherine T. MacArthur Foundation and supported by the generosity of Don C. and Jeane M. Bertsch, is aimed at understanding the nature and scope of political polarization in the American public, and how it interrelates with government, society and people's personal lives.

The second report, coming in a few weeks, is the new Pew Research Center Political Typology. The typology - the sixth such study since 1987 - looks beyond Red vs. Blue divisions to gain a clearer understanding of the dynamic nature of the "center" of the American electorate, and the internal divides on both the left and the right.

Later, the project will explore the various factors that contribute to political polarization, or stem from it. A September report will examine how political polarization is linked to people's information environments: Their news sources, social media habits and interpersonal communication networks. Other reports will look at how political polarization relates to where people live, to their political environments, to how they view themselves and others around them, to their socioeconomic circumstances, to generational changes and to broader sociological and psychological personality traits.

The current report is divided into five parts: The first two focus on measuring the nature and scope of political polarization, emphasizing the difference between growing ideological consistency and rising partisan antipathy. The third looks closely at how polarization manifests itself in people's personal lives. The fourth looks at the relationship between polarization and practical policymaking, and the fifth digs deeper into how political participation both amplifies and reflects polarization.

## About the Data

The data in this report are based on two independent survey administrations with the same randomly selected, nationally representative group of respondents. The first is the center's largest survey on domestic politics to date: the 2014 Political Polarization and Typology Survey, a national telephone survey of 10,013 adults, on landlines and cell phones, from January through March of this year. The second involved impaneling a subset of these respondents into the newly created American Trends Panel and following up with them via a survey conducted by web and telephone. The two surveys are described separately, in further detail, in the About the Surveys section of the report.

## Section 1: Growing Ideological Consistency

A decade ago, the public was less ideologically consistent than it is today. In 2004, only about one-in-ten Americans were uniformly liberal or conservative across most values. Today, the share who are ideologically consistent has doubled: 21\% express either consistently liberal or conservative opinions across a range of issues - the size and scope of government, the environment, foreign policy and many others.

## How We Define "Ideological Consistency"

Throughout this report we utilize a scale composed of 10 questions asked on Pew Research Center surveys going back to 1994 to gauge peoples' ideological worldview. The questions cover a range of political values including attitudes about size and scope of government, the social safety net, immigration, homosexuality, business, the environment, foreign policy and racial discrimination. The individual items are discussed at the end of this section, and full details about the scale are in appendix $A$.

The scale is designed to measure how consistently liberal or conservative people's responses are across these various dimensions of political thinking (what some refer to as ideological 'constraint'). Other sections of the report look at people's levels of partisanship, engagement and policy views. Where people fall on this scale does not always align with whether they think of themselves as liberal, moderate or conservative. See the discussion at the end of this section for this analysis.
uniformly liberal responses, and more Republicans give uniformly conservative responses than at any point in the last 20 years.

To be sure, those with across-the-board liberal or conservative views remain in the minority; most Americans continue to express at least some mix of liberal and conservative attitudes.

## Why We Include "Leaners" in the Republican and Democratic Groups

Throughout most of this report, Republicans and Democrats include independents who lean toward the parties. In virtually all situations, these Republican and Democratic leaners have far more in common with their partisan counterparts than they do with each other if combined into a single "independent" group. See appendix B for more detail. Yet those who express ideologically consistent views have disproportionate influence on the political process: They are more likely than those with mixed views to vote regularly and far more likely to donate to political campaigns and contact elected officials (See section 5 ).

Moreover, consistent liberals and conservatives approach the give-and-take of politics very differently than do those with mixed ideological views. Ideologically consistent Americans generally believe the other side - not their own - should do the giving. Those in the middle, by contrast, think both sides should give ground (See section 4).

## As Partisans Move Further Apart, the Middle Shrinks

In 2012, the Pew Research Center updated its 25-year study of the public's political values, finding that the partisan gap in opinions on more than 40 separate political values had nearly doubled over the previous quarter century. The new study investigates whether there is greater ideological consistency than in the past; that is, whether more people now have straight-line liberal or conservative attitudes across a range of issues, from homosexuality and immigration to foreign policy, the environment, economic policy and the role of government.

The graphic below shows the extent to which members of both parties have become more ideologically consistent and, as a result, further from one another. When responses to 10 questions are scaled together to create a measure of ideological consistency, the median (middle) Republican is now more conservative than nearly all Democrats (94\%), and the median Democrat is more liberal than $92 \%$ of Republicans.

Democrats and Republicans More Ideologically Divided than in the Past
Distribution of Democrats and Republicans on a 10-item scale of political values

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). The blue area in this chart represents the ideological distribution of Democrats; the red area of Republicans. The overlap of these two distributions is shaded purple. Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents (see Appendix B). See the online edition of this report for an animated version of this graphic.

PEW RESEARCH CENTER

In 1994, the overlap was much greater than it is today. Twenty years ago, the median Democrat was to the left of $64 \%$ of Republicans, while the median Republican was to the right of $70 \%$ of Democrats. Put differently, in 1994 23\% of Republicans were more liberal than the median

Democrat; while $17 \%$ of Democrats were more conservative than the median Republican. Today, those numbers are just $4 \%$ and $5 \%$, respectively.

Republicans Shift to the Right, Democrats to the Left
Distribution of Republicans and Democrats on a 10-item scale of political values

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents (see Appendix B).

PEW RESEARCH CENTER

As partisans have moved to the left and the right, the share of Americans with mixed views has declined. Across the 10 ideological values questions in the scale, $39 \%$ of Americans currently take a roughly equal number of liberal and conservative positions. That is down from nearly half (49\%) of the public in surveys conducted in 1994 and 2004. As noted, the proportion of Americans who are now more uniformly ideological has doubled over the last decade: About one-in-five Americans
(21\%) are now either consistently liberal (12\%) or consistently conservative (9\%) in their political values, up from just one-in-ten in 2004 (11\%) and 1994 (10\%).

## More Democrats Take Liberal Positions, More Republicans Take Conservative Positions

Percent of Democrats with political values that are...

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents (see Appendix B).

PEW RESEARCH CENTER

This translates into a growing number of Republicans and Democrats who are on completely opposite sides of the ideological spectrum, making it harder to find common ground in policy debates. The share of Democrats who hold consistently liberal positions has quadrupled over the course of the last 20 years, growing from just 5\% in 1994 to $13 \%$ in 2004 to $23 \%$ today. And more Republicans are consistently conservative than in the past ( $20 \%$ today, up from 6\% in 2004 and $13 \%$ in 1994), even as the country as a whole has shifted slightly to the left on the 10

## Are They "Ideologues?" Value Sorting vs. Extreme Views

Being ideologically consistent does not equate to being politically "extreme" -- an important distinction in understanding polarization. This is one reason why we avoid using the term "ideologue" to describe those on the tails of the ideological consistency scale.

Section 4 of the report explores the relationship between being ideologically consistent and holding positions on the periphery of current policy debates-finding evidence that those who are ideologically mixed are often as likely to hold more "extreme" positions as those who are more ideologically consistent. Conversely, one can be uniformly liberal (or conservative) in one's political values, but have a "moderate" approach to issues.

## Growing Minority Holds Consistent Ideological Views

## PEW RESEARCH CENTER

## Is Polarization Asymmetrical?

The ideological consolidation nationwide has happened on both the left and the right of the political spectrum, but the long-term shift among Democrats stands out as particularly noteworthy. The share of Democrats who are liberal on all or most value dimensions has nearly doubled from just $30 \%$ in 1994 to $56 \%$ today. The share who are consistently liberal has quadrupled from just $5 \%$ to $23 \%$ over the past 20 years.

In absolute terms, the ideological shift among Republicans has been more modest, in 1994, $45 \%$ of Republicans were right-of-center, with $13 \%$ consistently conservative. Those figures are up to $53 \%$ and $20 \%$ today.

But there are two key considerations to keep in mind before concluding that the liberals are driving ideological polarization. First, 1994 was a relative high point in conservative political thinking among Republicans. In fact, between 1994 and 2004 the average Republican moved substantially toward the center ideologically, as concern about the deficit, government waste and abuses of social safety net that characterized the "Contract with America" era faded in the first term of the Bush administration.

But since 2004, Republicans have veered sharply back to the right on all of these dimensions, and the GOP ideological shift over the past decade has matched, if not exceeded, the rate at which Democrats have become more liberal.

A second consideration is that the nation as a whole has moved slightly to the left over the past 20 years, mostly because of a broad societal shift toward acceptance of homosexuality and more positive views of immigrants. Twenty years ago, these two issues created significant cleavages within the Democratic Party, as many otherwise liberal Democrats expressed more conservative values in these realms. But today, as divisions over these issues have diminished on the left, they have emerged on the right, with a subset of otherwise conservative Republicans expressing more liberal values on these social issues.

However, on economic issues and the role of government, Republicans and Democrats are both substantially more consolidated than in the past: $37 \%$ of Republicans are consistently conservative and $36 \%$ of Democrats are consistently liberal on a five-item subset of the scale restricted to just the items about economic policy and the size of government. In 1994, those proportions were $23 \%$ and $21 \%$, respectively.

## Political Engagement Increasingly Linked to Polarization

In today's political environment, party (and partisan leaning) predicts ideological consistency more than ever before, and this is particularly the case among the politically attentive. Among Americans who keep up with politics and government and who regularly vote, fully $99 \%$ of Republicans are now more conservative than the median Democrat, while 98\% of Democrats are more liberal than the median Republican. While engaged partisans have always been ideologically divided, there was more overlap in the recent past; just 10 years ago these numbers were $88 \%$ and $84 \%$, respectively.

## Polarization Surges Among the Politically Engaged

Distribution of Democrats and Republicans on a 10-item scale of political values, by level of political engagement
Among the politically engaged

Among the less engaged

[^0]Today, almost four-in-ten (38\%) politically engaged Democrats are consistent liberals, up from only $8 \%$ in 1994 and 20\% in 2004. And the rise is also evident on the right: $33 \%$ of politically engaged Republicans are consistent conservatives, up from $23 \%$ in 1994, and just 10\% in 2004.

Within both parties, $70 \%$ of the politically engaged now take positions that are mostly or consistently in line with the ideological bent of their party. By comparison, the equivalent positions were held by $58 \%$ of Republicans and $35 \%$ of Democrats in 1994 and 40\% of Republicans and $59 \%$ of Democrats in 2004.

Engaged citizens have always tended to be more ideologically oriented, but the correlation has increased in recent years, particularly among Democrats. Today, 70\% of highly engaged
Democrats are mostly or

PEW RESEARCH CENTER
consistently liberal in their views, compared with about half (49\%) of less engaged Democrats (the other half are either ideologically mixed or conservative). Twenty years ago, there was far less of an engagement gap in ideological thinking, as $35 \%$ of highly engaged and $28 \%$ of less engaged Democrats were left of center.

The shift in ideology among Republicans is more complex. Between 1994 and 2004
Republicans actually became less ideologically oriented, as support for government programs and more positive views about the effectiveness of government grew during George W. Bush's first term. But over the past decade, the GOP has moved solidly to the right - particularly those who are more politically engaged. Today, 70\% of highly engaged Republicans are either consistently or mostly conservative, up from $40 \%$ in 2004. By comparison, just $38 \%$ of less engaged Republicans are right of center (the majority offer a mix of liberal and conservative views).

## Defining Political Engagement

Participation in politics is one of the key correlates of polarization, and is measured in greater detail in a separate section of this report. Because the analysis here is making comparisons over time, we are limited to using three questions that were asked consistently in Pew Research surveys since 1994. To be classified as "highly engaged," a respondent must say they are registered to vote, always or nearly always vote, and follow what is going on in government and public affairs most of the time. In each year of the study, this represents roughly a third of the public, while the other two-thirds are classified as "less engaged."

The 2014 survey goes into far greater detail on various forms of political participation and engagement, with more detail here (See section 5).

## Polarization among Elected Officials

This movement among the public, and particularly the engaged public, tracks with increasingly polarized voting patterns in Congress, though to a far lesser extent. As many congressional scholars have documented, Republicans and Democrats on Capitol Hill are now further apart from one another than at any point in modern history, and that rising polarization among elected officials is asymmetrical, with much of the widening gap between the two parties attributable to a rightward shift among Republicans. As a result, using a widely accepted metric of ideological positioning, there is now no overlap between the two parties; in the last full session of Congress (the 112th Congress, which ran from 2011-12), every Republican senator and representative was more conservative than the most conservative Democrat (or, putting it another way, every Democrat was more liberal than the most liberal Republican).

But this was not always the case. Forty years ago, in the 93rd Congress (1973-74), fully 240 representatives and 29 senators were in between the most liberal Republican and most conservative Democrat in their respective chambers. Twenty years ago (the $103{ }^{\text {rd }}$ Congress from 1993-94) had nine representatives and three senators in between the most liberal Republican and most conservative Democrat in their respective chambers. Today, there is no overlap. And while by this measure the pace of change may appear to have slowed in the past 20 years, the ideological distance between members of the two parties has continued to grow steadily over this period.

## Growing Partisan Polarization Spans Domains

The growth in partisan polarization is evident across a range of political values, as nearly all of the traditional gaps between Republicans and Democrats have widened. The results of the current survey echo the findings in the 2012 values study.

The current survey tracks trends on a different set of questions going back to 1994, with parallel conclusions: Partisan divides have deepened across most core political domains, including on nearly every measure in the ideological consistency scale.

For instance, while Democrats have always been more supportive than Republicans of the social safety net, the partisan divide on these questions has increased substantially over the last 20 years. Two-thirds of Republicans (66\%) believe that "poor people today have it easy because they can get government benefits without doing anything in return;" just $25 \%$ say "poor people have hard lives because government benefits don't go far enough to help them live decently." Among Democrats, just $28 \%$ believe the poor have it easy. The partisan gap on this measure is now 38 points, up from 19 points in 1994 and 26 points in 2004.

Similarly, in 1994, there was a relatively narrow 10-point partisan gap in views on environmental regulation. Today, the gap is 35 points, as the proportion of Republicans who say that "stricter environmental laws and regulations cost too many jobs and hurt the economy" has grown from $39 \%$ in 1994 to $59 \%$, while Democratic opinion has shifted slightly in the other direction.

## Growing Gaps between Republicans and Democrats

$\%$ who take the more conservative position on each question in the ideological consistency scale

Source: 2014 Political Polarization in the American Public
Line charts show the survey questions included in the 10-item ideological consistency scale. Questions are forced-choice questions with two options; only the conservative responses are shown here. See topline for the full question wording and trends for each question.
PEW RESEARCH CENTER

And although immigration attitudes have shifted in a liberal direction among both Democrats and Republicans, a partisan gap has emerged where none was evident 20 years ago. In 1994, 64\% of Republicans and $62 \%$ of Democrats viewed immigrants as a burden on the country; today $46 \%$ of Republicans but just 27\% of Democrats say this.

For nine of the 10 items in the ideological consistency scale, the partisan gap has grown wider over the last 20 years. The sole exception is in views of homosexuality: Both Democrats and Republicans have become more liberal on this question over the years, as fewer now say that "homosexuality should be discouraged (rather than accepted) by society." However, the current 21-point partisan gap on this question is only slightly wider than the 16 point gap in 1994.

## Ideological Self-Placement and Ideological Consistency

Where people fall on the scale of ideological consistency discussed throughout this report is strongly correlated with how people describe themselves. But for some, how they see their own ideology doesn't align with their expressed political values.

In recent years, Americans have consistently been far more likely to self-identify as conservative than as liberal by a $36 \%$ to $23 \%$ margin in the current survey.

Fully $84 \%$ of those who are consistently conservative in their ideological positions call themselves conservative, as does a smaller majority (61\%) of those who are "mostly conservative" on the scale.

But those who express consistently or mostly liberal values, are less likely to embrace the "liberal" label.

## Ideological Self-Placement Mostly Corresponds to Political Values, With Some Exceptions

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). Ideological self-placement based on one question with five response options. PEW RESEARCH CENTER

About six-in-ten (62\%)
consistent liberals say they are liberal, with $31 \%$ saying they are moderate, and a handful (6\%) calling themselves conservative. And among those who are mostly liberal on the ideological consistency scale, more (44\%) say they are moderate than say they are liberal (32\%).

While the plurality (42\%) of those who are ideologically mixed label themselves as moderate, the remainder are more likely to say they are conservative (33\%) than liberal (19\%).

## Section 2: Growing Partisan Antipathy

Source: 2014 Political Polarization in the American Public
Note: Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents (see Appendix B).
PEW RESEARCH CENTER

There is nothing new about Republicans disliking the Democratic Party or, conversely, Democrats not liking the GOP. But the level of antipathy that members of each party feel toward the opposing party has surged over the past two decades. Not only do greater numbers of those in both parties have negative views of the other side, those negative views are increasingly intense. And today, many go so far as to say that the opposing party's policies threaten the nation's well-being.

Though negative ratings of the other party were common 20 years ago, relatively few Republicans and Democrats had deeply negative opinions. In 1994, when the GOP captured the House and Senate after a bitter midterm campaign, about two-thirds (68\%) of Republicans and Republican leaners had an unfavorable opinion of the Democratic Party, but just $17 \%$ had a very unfavorable opinion. At the same time, though a majority of Democrats and Democratic leaners (57\%) viewed the GOP unfavorably, just $16 \%$ had a very unfavorable view. Today, negative ratings have risen overall (about eight-in-ten of both Republicans and Democrats rate the other party unfavorably), but deeply negative views have more than doubled: $38 \%$ of Democrats and $43 \%$ of Republicans now view the opposite party in strongly negative terms. The rise in negative views of the opposing
party is also seen in "feeling thermometer" ratings in the American National Election Studies, as partisans now give "cooler" ratings to the opposing party than they did in the past.

The survey finds that this strong dislike verges on alarm for many. In both political parties, most of those who view the other party very unfavorably say that the other side's policies "are so misguided that they threaten the nation's well-being." Overall, $36 \%$ of Republicans and Republican leaners say that Democratic policies threaten the nation, while $27 \%$ of Democrats and Democratic leaners view GOP policies in equally stark terms.

This kind of hostility toward the opposing party is strongly related to political participation and activism. For example, $54 \%$ of Republicans and $46 \%$ of Democrats who have made campaign donations in the past two years describe the other political party as a threat to the nation. In other words, those who arguably have the greatest impact on politics are most likely to have strongly negative feelings toward the opposing party.

And among members of both parties, intense dislike of the political opposition - like ideological polarization - is strongly linked to other views and behaviors as well, such as how willing people are to support compromise in Washington (See section 4), and how they view personal interactions with people from the other political party (See section 3)

The growing partisan antipathy detailed here is one major aspect of political polarization. Another is ideological polarization - the growing share of Americans who hold consistently liberal or conservative views across a wide range of issues (See section 1). These trends are connected, but not identical, and both ideological consistency and partisan antipathy individually are important elements of the broader polarized landscape.

## Ideology and Partisan Antipathy Increasingly Intertwined

## The Growing Link between Ideology and Partisan Antipathy

$\%$ with a very unfavorable opinion of the Republican Party

Source: 2014 Political Polarization in the American Public
Note: Ideological consistency based on a scale of 10 political values questions (see Appendix A).
PEW RESEARCH CENTER
Twenty years ago, fewer Americans were consistently liberal or conservative in their views about politics and society and even those who were ideologically oriented did not express the animosity toward the other side that is common today. In 1994 - hardly a moment of goodwill and compromise in American politics - just 23\% of consistent liberals expressed a very unfavorable view of the Republican Party. And just $28 \%$ of consistent conservatives saw the Democratic Party in equally negative terms.

But today, the majority of ideologically-oriented Americans hold deeply negative views of the other side. This is particularly true on the right, as $72 \%$ of consistent conservatives have a very unfavorable opinion of the Democratic Party. Consistent liberals do not feel as negatively toward the GOP; nonetheless, $53 \%$ of consistent liberals have very unfavorable impressions of the GOP, more than double the share that did so two decades ago.

## A Deep-Seated Dislike, Bordering on Sense of Alarm

## Seeing the Other Party as a Threat to Nation

\% saying (Republican/Democratic) Party policies "are so misguided that they threaten the nation's well-being"

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents (see Appendix B).

PEW RESEARCH CENTER

At a time of historically low levels of trust in government and other national institutions, expressing a "very unfavorable" opinion of the opposing political party may not seem like a signal of intense hostility. However, when given the chance to express even stronger criticism, most who hold highly negative views of the opposing party do so.

After expressing a very unfavorable view of one or the other party, respondents were asked: "Would you say the party's policies are so misguided that they threaten the nation's well-being, or wouldn't you go that far?" The question was intentionally designed to suggest that this was a high bar; nevertheless, the vast majority of those who were asked the question agreed. Among all Democrats and Democratic leaners, $27 \%$ go so far as to say the GOP is a threat to the well-being of the country. Among all Republicans and Republican leaners, more than a third (36\%) say Democratic policies threaten the nation.

## Republican Antipathy toward Obama

While there are plenty on both the left and the right who express these levels of antipathy toward the other side, there is substantially more anger among conservatives than among liberals. At the most extreme, two-thirds (66\%) of consistently conservative Republicans see the Democratic Party as a threat to the nation's well-being, compared with the half (50\%) of consistently liberal Democrats who say the same about the Republican Party. And this concern reaches well beyond the right wing of the Republican Party, as nearly half (46\%) of mostly conservative Republicans see the Democratic Party as a threat to the nation's well-being; by contrast, $22 \%$ of mostly liberal Democrats see the GOP as a threat.

At least in part, the strongly negative views Republicans have of the Democratic Party reflect their deep-seated dislike of Barack Obama. In the current survey, just $12 \%$ of Republicans and Republican leaners say they approve of the job Obama is doing in office, while $84 \%$ disapprove, including $71 \%$ who very strongly disapprove.

This impassioned Republican discontent has persisted from the early days of Obama's presidency, yet it is only the latest instance of a longer pattern in how the public assesses its presidents. There has been a steadily growing level of partisan division over presidential performance over the past 60 years, and it is driven almost entirely by broader disapproval from the opposition party, not by greater loyalty among the president's party. And in that regard, the phenomenon is not limited to Republicans. At a comparable point in George W. Bush's presidency eight years ago, Democratic disapproval of Bush's job performance was on par with Republicans' ratings of Obama today; in April 2006, 87\% of Democrats and Democratic leaners disapproved of Bush's job performance, and $75 \%$ very strongly disapproved.

Modern presidents, from Dwight Eisenhower through Barack Obama, have generally enjoyed a job approval rating of around $80 \%$ from their own partisan base. The exceptions are the lower ratings Lyndon Johnson, Richard Nixon, Gerald Ford and George W. Bush received from within their parties in their difficult final years in office, and the distinct lack of enthusiasm Democrats expressed for Jimmy Carter through most his presidency. Obama's job approval rating among Democrats (on average, $81 \%$ approval over the course of his presidency so far) has been roughly the same as Republicans' ratings for two of the party's icons - Ronald Reagan in the 1980 and (83\%) and Eisenhower in the 1950s (88\%).

Polarization and Presidential Approval: Supporters Stay Loyal, Opposition Intensifies
\% approving of president's job performance, by party

Source: 2014 Political Polarization in the American Public
Notes: Data from Eisenhower through George H. W. Bush from Gallup. Because some earlier data did not include partisan leaning, Republicans and Democrats in this graphic do not include leaners.
PEW RESEARCH CENTER

By comparison, the views of people in the opposing party have become steadily more negative. From 1953-1960, an average of nearly half (49\%) of Democrats said they approved of the job Republican president Dwight Eisenhower was doing in office. Over the course of Reagan's presidency, nearly a third (31\%) of Democrats approved of his job performance. Just over a quarter (27\%) of Republicans offered a positive assessment of Bill Clinton between 1993 and 2000. But the two most recent presidents have not received even this minimal support. George W. Bush's job ratings among Democrats were relatively strong in the post-9/11 period, but in the last five years of his presidency, only $12 \%$ of Democrats, on average, approved of his job performance. That is similar to Obama's ratings among Republicans ( $14 \%$ on average) over the course of his presidency.

Not only have partisans become more uniform in their disapproval of presidents from the other party, they are also more inclined to express deeply negative personal evaluations of the men holding the office. Most Republicans (78\%) have an unfavorable opinion of Obama, and $45 \%$ rate him very unfavorably. Those ratings represent an improvement in GOP views of Obama. In the midst of the government shutdown and debt limit negotiations last October, $88 \%$ viewed him unfavorably, with $62 \%$ saying their opinion was very unfavorable.

But this is not unique to Republican views of Obama. Democratic views of George W. Bush reached similar territory during his second term, as the war in Iraq became a partisan dividing line compounded by reactions to other aspects of Bush's presidency, including his handling of Hurricane Katrina. By April 2008, nearly nine-in-ten Democrats had unfavorable views of Bush $-66 \%$ viewed him very unfavorably.

## Intensely Negative Views of Obama and Bush from Opposing Party

$\%$ of the other party with very unfavorable view of the president

[^1]By contrast, this level of deeply negative personal evaluations from the opposing side wasn't as evident during Bill Clinton's presidency. Even as clear majorities of Republicans expressed unfavorable opinions of Bill Clinton during his time in office, the proportion saying their opinion was very unfavorable peaked at $47 \%$.

## Antipathy and Engagement

Holding deeply negative views of the opposite party and its leaders is correlated with political participation, and this is particularly true among Republicans in the current context. Republicans who hold a very unfavorable opinion of the Democratic Party are 18 points more likely than those whose opinion is mostly unfavorable to say they always vote. They are also almost twice as likely to have made a donation to a campaign or candidate ( $23 \% \mathrm{vs} .12 \%$ ). Importantly, how Republicans view their own political party has little association with their participation in these ways. Those who hold very favorable views of the GOP are no more or less likely to be politically active than those with less favorable views.

## Voting, Donations Linked to Negative Views of the Other Party

Source: 2014 Political Polarization in the American Public
Note: Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents (see Appendix B).
PEW RESEARCH CENTER

The same pattern exists when it comes to Democratic campaign donors. Democrats with a very unfavorable opinion of the GOP are substantially more likely than those who feel only mostly unfavorably to have made a donation in the past two years ( $22 \%$ vs. $14 \%$ ). But there are no differences in self-reported donations among Democrats who have a very favorable opinion of their own party and those who have a mostly favorable view. Yet when it comes to voting among Democrats, strong views of both political parties tend to matter. Democrats who view the GOP very unfavorably are 12 points more likely to always vote than those who only mostly dislike the Republican Party. But those who feel very positively about their own party are also 12 points more likely to always vote than those who are only mostly positive.

As we show elsewhere, both partisan animosity and ideological consistency are linked to higher levels of political participation, and in fact the effect is compounded among those who think both in ideological and partisan terms. And both also affect how Americans view negotiations and compromise in Washington and even how people interact with those around them. As partisan antipathy and ideological consistency have grown, each contributes substantially to a more polarized political environment in elections, in Washington and in society more generally.

## Section 3: Political Polarization and Personal Life

Liberals Want Walkable Communities, Conservatives Prefer More Room
Would you prefer to live in a community where ...

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A)."Don't know" responses not shown.
PEW RESEARCH CENTER

Liberals and conservatives are divided over more than just politics. Those on the opposite ends of the ideological spectrum disagree about everything from the type of community in which they prefer to live to the type of people they would welcome into their families.

It is an enduring stereotype - conservatives prefer suburban McMansions while liberals like urban enclaves - but one that is grounded in reality. Given the choice, three-quarters ( $75 \%$ ) of consistent conservatives say they would opt to live in a community where "the houses are larger and farther apart, but schools, stores and restaurants are several miles away," and just $22 \%$ say they'd choose to live where "the houses are smaller and closer to each other, but schools, stores and restaurants are within walking distance." The preferences of consistent liberals are almost the exact inverse, with $77 \%$ preferring the smaller house closer to amenities, and just $21 \%$ opting for more square footage farther away.

Americans overall are divided almost evenly in this preference, with $49 \%$ preferring the larger houses and $48 \%$ preferring the more convenient locations.

Liberals and conservatives don't disagree on all community preferences. For example, large majorities of both groups attach great importance to living near family and high-quality public schools.

Yet their differences are striking: liberals would rather live in cities, while conservatives prefer rural areas and small towns; liberals are more likely to say racial and ethnic diversity is important in a community; conservatives emphasize shared religious faith. And while $73 \%$ of consistent liberals say it's important to them to live near art museums and theaters, just $23 \%$ of consistent conservatives agree - one of their lowest priorities of eight community characteristics tested.

This section explores these and other key ways in which political polarization is linked to people's personal lives and day-to-day interactions. As Republicans and Democrats are growing further apart, increasingly polarized along ideological lines (See section 1) and with greater antipathy toward the opposing party (See section 2), divides in the political sphere also permeate the everyday lives of Americans.

Consistent conservatives and liberals do share one habit that distinguishes them from other Americans: They spend a lot of time talking about politics and government. This is part of a pattern of more intense political engagement among those at either end of the ideological spectrum (See section 5 ).

Yet conservatives and liberals also are most likely to confine political conversations to those who share their views. Fully half of consistent conservatives (50\%) and $35 \%$ of consistent liberals say it is important to them to live in a place where most people share their political views - the highest shares of any of the ideological groups. If people living in "deep red" or "deep blue" America feel like they inhabit distinctly different worlds, it is in part because they seek out different types of communities, both geographic and social.

## Ideological "Silos"

Source: 2014 Political Polarization in the American Public
Note: Ideological consistency based on a scale of 10 political values questions (see Appendix A).
PEW RESEARCH CENTER

## The Ideal Community: Different for Liberals than for Conservatives

When it comes to the type of community they'd like to live in, liberals are drawn toward city life while conservatives prefer small towns and rural areas. Given the choice to live anywhere in the U.S., $41 \%$ of consistent conservatives would want to live in a rural area, and an additional $35 \%$ would choose a small town. Fewer consistent conservatives (20\%) would prefer living in the suburbs and just $4 \%$ want to live in a city.

In a near mirror image, $46 \%$ of consistent liberals would choose to live in a city, and $21 \%$ would choose the suburbs; far fewer would pick a rural area (11\%) or a small town (20\%).

The preferences of less ideological Americans are more varied. Notably, the suburbs do not have a great deal of appeal for any ideological segment. And across age, gender and other demographic categories, there is no group that expresses a clear preference for living in the suburbs.

An analysis of the data finds that where liberals and conservatives actually live reflects their community preferences, with liberals about twice as likely as conservatives to live in urban areas, while conservatives are more concentrated in rural areas.

Source: 2014 Political Polarization in the American Public Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A).Don't know responses not shown. PEW RESEARCH CENTER

Later reports in this Pew Research Center
series will dive more deeply into how political views are related to where people live. This is a topic covered extensively by Craig Gilbert of the Milwaukee Journal Sentinel, in a four-part series entitled "Dividing Lines."

## What's Important in a Community?

Despite their differing community preferences, liberals and conservatives generally share a desire to be close to family, good schools and the outdoors. However, when it comes to the ethnic, religious or political makeup of a community, there are clear ideological divides.

Substantial majorities across all ideological groups place importance on living near extended family, though consistent liberals are a bit less likely than others to say this.

Likewise, large majorities say "high-quality public schools" are important to decisions about where to live.
Reflecting their stage of life, people age 55 and older are less likely than younger people to value good schools. To control for this lifecycle

## Liberals, Conservatives Agree on Importance of Living Near Family, Good Schools and the Outdoors

\% saying each would be important in deciding where to live...

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A)."High- quality public schools" based on those under 55.

PEW RESEARCH CENTER difference (and because older Americans tend to be more conservative ideologically), the analysis here is based only on those under 55 .

Within this cohort, an emphasis on high-quality schools is slightly lower among conservatives than liberals. But across all ideological groups, this ranks as the top community priority of the eight items tested.

Having access to the outdoors for hiking, camping and fishing also is a widely valued community attribute. However, there is an ideological split in the importance placed on access to another type of leisure activity: art museums and theaters. More than three times as many consistent liberals ( $73 \%$ ) as consistent conservatives ( $23 \%$ ) rate proximity to museums and galleries as important. There also is a wide gap among people with mostly liberal (59\%) and mostly conservative (31\%) views.

There are similarly deep ideological divides in the importance placed on racial and ethnic diversity and living near those who share one's religious faith. Majorities of consistent liberals (76\%) and those who are mostly liberal (58\%) say living somewhere with a mix of people from different racial and ethnic backgrounds would be important to them; far fewer conservatives (20\% of consistent conservatives, $32 \%$ of mostly conservatives) say

## Ethnic Diversity More Important for Liberals, Faith Community More Important for Conservatives

\% saying each would be important in deciding where to live...

Notes: Ideological consistency based on a scale of 10 political values questions (see
Appendix A).
PEW RESEARCH CENTER this. (This ideological pattern is nearly identical when the analysis is limited to non-Hispanic whites.)

At the same time, conservatives place more importance on living in a place where many people share their religious faith. A majority ( $57 \%$ ) of consistent conservatives say this is important to them, compared with just $17 \%$ of consistent liberals.

## Marrying Across Party Lines

While Republicans and Democrats hold increasingly negative views of the opposing party (See section 2), expressions of deep dislike on a more personal level are less common. But they do exist, and as with dislike of the opposing party, personal antipathy is most concentrated among those who hold ideologically consistent views.

Most Americans are comfortable with political diversity in their households. Just 9\% of the public say they would be unhappy if an immediate family member were to marry a Republican, and about the same percentage (8\%) would be unhappy about the prospect of a Democrat marrying into their immediate family. Roughly equal percentages of Democrats (15\%) and Republicans (17\%) say they would be unhappy welcoming someone from the other party into their family.

## Some Would be Unhappy if Family Member Married 'Outside’ of Party

How would you react if an immediate family member were to marry...

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). "Doesn't matter" includes "don't know" responses. Percentages many not add to $100 \%$ because of rounding.
PEW RESEARCH CENTER

This discomfort is most prevalent among those who are the most ideological in their thinking. Three-in-ten (30\%) consistent conservatives say they'd be unhappy if a family member married a Democrat, while $23 \%$ of consistent liberals say they'd be unhappy if a Republican were to marry into the family. Yet even at the ends of the ideological spectrum, active expressions of unhappiness about marrying a Republican or a Democrat are the minority position.

Beyond the partisan affiliations of potential family members, the importance of other characteristics also differs for liberals and conservatives. Roughly half of Americans (49\%) say they would be unhappy if a family member were to marry someone who doesn't believe in God.

This rises to $73 \%$ among consistent conservatives, along with $58 \%$ of those who are mostly conservative. Liberals are much less likely to be unhappy with a non-believer marrying into their families: $24 \%$ of consistent liberals and $41 \%$ of those who are mostly liberal say they would be unhappy.

## Marriage to an Atheist Upsetting to Most Conservatives

How would you react if an immediate family member were to marry ...

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). "Doesn't matter" includes "don't know" responses. Percentages many not add to 100\% because of rounding.
PEW RESEARCH CENTER

Only $9 \%$ of Americans say they would be unhappy with a family member's marriage to a bornagain Christian. But this sentiment triples to $27 \%$ among consistent liberals. Consistent liberals are as likely to say they'd be unhappy with a family member's marriage to a non-believer (24\%) as a born-again Christian (27\%).

Just $\mathbf{1 1 \%}$ of Americans say they would be unhappy at the prospect of a family member marrying someone of a different race, and only $7 \%$ say the same about a marriage to someone born and raised outside of the U.S. But both of these sentiments are more common on the right than on the left.

## Guess Who's Coming? Ideological Differences in Views of Family Member Marrying Different Race, Gun Owner

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). "Doesn't matter" includes "don't know" responses. Percentages many not add to $100 \%$ because of rounding.

PEW RESEARCH CENTER

About a quarter ( $23 \%$ ) of consistent conservatives, along with $19 \%$ of those who are mostly conservative, say they'd be unhappy with a family member's marriage to someone of a different race. Most conservatives ( $77 \%$ ) say it wouldn't matter or they would be happy about this. By comparison, just $1 \%$ of consistent liberals and $4 \%$ of those who are mostly liberal say they would be unhappy if a relative marries someone of a different race.

Reaction to a gun owner joining the family exposes a somewhat greater ideological divide. Nationwide, $19 \%$ of Americans say they would be unhappy if someone in their immediate family married a gun owner, while $17 \%$ say they would be happy (most say it wouldn't matter to them).

Most consistent liberals agree that it wouldn't matter to them, but $31 \%$ say it would make them unhappy if someone in their immediate family married a gun owner while just $5 \%$ would be happy about it. Gun ownership draws far greater enthusiasm among consistent conservatives, $49 \%$ of whom would be happy to welcome a new gun-owning family member, and just $1 \%$ would be unhappy about it. For more on gun policy views, see section 4).

While the divides over whether a prospective in-law hasn't attended college are comparatively small, liberals are somewhat likelier than conservatives to say they'd be unhappy with this ( $17 \%$ of consistent liberals would be unhappy, compared with $8 \%$ of consistent conservatives).

## Consistent Liberals, Conservatives Talk Politics More Often

Most Americans don't talk about politics all that frequently: $58 \%$ of the public discusses government and politics a few times a month or less, while $42 \%$ discuss politics more often.

On average, Republicans talk about politics more frequently than Democrats ( $49 \%$ vs. $39 \%$ talk a few times a week or more), but discussions about politics are considerably more common among those with ideologically consistent views, on both the left and the right.

About seven-in-ten (69\%) consistent conservatives and six-in-ten (59\%) consistent liberals talk about politics a few times a week or more; that compares with just $32 \%$ of those who are ideologically mixed. And while those who are mostly liberal in their views are no more likely to talk about politics than the ideologically mixed (just $34 \%$ do so at least a few times a week), those with mostly conservative positions are (48\%).

## How Often Do You Discuss Government and Politics?

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). "Less often" includes those who say "A few times a month" or "Less often." Percentages may not add to $100 \%$ because of rounding.

PEW RESEARCH CENTER

## The Ideological Echo Chamber

Not only do people who are ideologically consistent talk about politics more frequently than others, but they are also more likely to say their friends share their political views. This is particularly the case among consistent conservatives.

Just $35 \%$ of Americans say "most of my close friends share my views on government and politics," while about as many (39\%) say "some of my friends share my views, but many do not." About a quarter (26\%) say: "I don't really know what most of my close friends think about government and politics."

But among consistent conservatives, roughly twice as many say most of their close friends share their views as say many of their friends do not ( $63 \%$ vs. $30 \%$ ). And among the mostly conservative, more also say their friends share their views ( $44 \%$ vs. $36 \%$ ).

## Most Conservatives Say Close Friends Share Their Political Views

What best describes you?

- Most of my close friends share my political views
- Some of my friends share my views, many do not I don't know what my friends think about politics

Source: 2014 Political Polarization in the American Public Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). Percentages many not add to $100 \%$ because of rounding.
PEW RESEARCH CENTER
Though consistent liberals are less likely than consistent conservatives to say most of their close friends share their political views, this is still the plurality opinion among this group: $49 \%$ say most of their friends share their views, while $39 \%$ say many of their friends do not share their views. Among both those who are ideologically mixed and those who are mostly liberal, just a quarter ( $25 \%$ ) say most of their friends share their political views.

## Dislike the Party, Avoid the People

These indicators suggest that there is a tendency on the left and the right to associate primarily with like-minded people, to the point of actively avoiding those who disagree. Not surprisingly, this tendency is also tightly entwined with the growing level of partisan antipathy. In both political parties, those with strongly negative views of the other side are more likely to be those who seek out compatible viewpoints.

## Partisan Animosity in the Personal Space

| Percent who say... | View of Dem Party |  |  |  | View of Rep Party |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | All Republicans | Very unfav | Mostly unfav | Diff | $\begin{gathered} \text { All } \\ \text { Democrats } \end{gathered}$ | Very unfav | Mostly unfav | Diff |
|  | \% | \% | \% |  | \% | \% | \% |  |
| Most of my close friends share my political views | 42 | 52 | 36 | +16 | 33 | 41 | 29 | +12 |
| It's important to me to live in a place where most people share my political views | 31 | 42 | 26 | +16 | 27 | 34 | 22 | +12 |
| I would be unhappy if someone in my immediate family married a (Democrat/Republican) | 17 | 29 | 10 | +19 | 15 | 28 | 7 | +21 |

Source: 2014 Political Polarization in the American Public
Note: Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents.
PEW RESEARCH CENTER

Roughly half (52\%) of Republicans with a very unfavorable view of the Democratic Party say most of their friends share their political views, compared with $36 \%$ of Republicans with less antipathy for the Democratic Party. And the same pattern exists among Democrats. The more polarized Republicans and Democrats are also substantially more likely to say they prefer living in a community where most people share their political views.

Not only do many of these polarized partisans gravitate toward like-minded people, but a significant share express a fairly strong aversion to people who disagree with them. Overall, $17 \%$ of Republicans say they would be unhappy if someone in their immediate family married a Democrat. But that aversion is three-times higher among Republicans who view the Democratic Party very negatively (29\%) than among those with less negative views (10\%).

Similarly, Democrats with a very unfavorable view of the Republican Party are four times as likely as those with a mostly unfavorable view to say they would be unhappy if someone in their family married a Republican ( $28 \%$ vs. $7 \%$ ).

## Polarized Views of Cable News

Public perceptions of two major news sources - MSNBC and the Fox News Channel (FNC) - are deeply divided along ideological lines. And what stands apart the most are the negative views among those on the other side of the ideological spectrum.

Notably, both of these news channels are viewed more favorably than unfavorably in the public at large, reflecting the fact that both receive generally favorable, or at least neutral, marks from people with mixed ideological views. In that regard, while consistent conservatives overwhelmingly express a positive view of the Fox News Channel ( $74 \%$ favorable), that is a more uniform expression of the generally favorable view found among the general public. By contrast, the strongly negative reaction to Fox News from consistent liberals - fully 73\% view FNC unfavorably and just $8 \%$ favorably - stands starkly apart.

Fox News, MSNBC Stir Up Negative Views among Ideologically Consistent

Source: 2014 Political Polarization in the American Public
Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). "Neither" includes don't know responses. Percentages may not add to $100 \%$ because of rounding.

PEW RESEARCH CENTER

The same pattern arises in views of MSNBC. Consistent conservatives are far-and-away the most likely to have an opinion of MSNBC, and it is overwhelmingly negative: $71 \%$ unfavorable and just $10 \%$ favorable. This stands in contrast to the positive balance of opinion from the public at large.

One thing that differs when it comes to MSNBC is that it does not draw the same uniformly positive reviews from consistent liberals that FNC does from consistent conservatives. While nearly half ( $45 \%$ ) of consistent liberals view MSNBC favorably, that's not much better than how

MSNBC rates among those with mixed ideological views (38\%). Nearly half of consistent liberals offer no opinion of MSNBC. By contrast, the vast majority of consistent conservatives offer an opinion of Fox News, with $74 \%$ favorable and just $5 \%$ unfavorable.

The Pew Research Center will dive much more deeply into the topic of media sources and polarization in a report later this year, exploring the relationship between actual media use and political polarization.

## Section 4: Political Compromise and Divisive Policy Debates

The nation's increasing ideological polarization makes political compromise more difficult, in part because those at opposite ends of the ideological spectrum see less benefit in meeting the other side halfway.

## Compromise in the Eye of the Beholder

When Barack Obama and Republican leaders differ over the most important issues facing the country, where should things end up?

Source: 2014 Political Polarization in the American Public
Notes: Question asks respondents where, on a scale of zero to 100, Obama and Republican leaders should end up when addressing the most important issues facing the country. See topline for complete question wording. Ideological consistency based on a scale of 10 political values questions (see Appendix A).

PEW RESEARCH CENTER

A logical point of compromise for most Americans is splitting things down the middle. But a significant minority - and a substantial share of the active and engaged electorate - see things differently, saying their side should get more of what it wants in political negotiations.

However, while they may be less amenable to political compromise, people on the left and the right are not necessarily more extreme in their policy views. To be sure, many Americans who have consistently liberal or conservative views support far-reaching policies on issues like gun control, abortion, health care or immigration. But in many cases they are no more likely to express these opinions than are those who hold a mixture of conservative and liberal views.

The survey includes several questions about

## How We Asked About "Compromise" Between Obama, Republican Leaders

Question wording: "Thinking about how Barack Obama and Republican leaders should address the most important issues facing the country. Imagine a scale from zero to 100 where 100 means Republican leaders get everything they want and Obama gets nothing he wants, and zero means Obama gets everything and Republican leaders get nothing. Where on this scale from zero to 100 do you think they should end up?" (Note: For half of the sample, the placements of Obama and Republicans are reversed.)

Any number between 0 and 100 was accepted as a response, with responses then collapsed into 11 categories, as illustrated here. See Q26 in the topline for these categories. proposals that are on the periphery of current policy debates, such as whether to launch a national effort to deport all unauthorized immigrants and whether to eliminate all restrictions on gun ownership and abortion. Sizable minorities of those who hold mixed ideological views support many of these proposals. This belies the popular conception of the center as largely made up of "moderates," in contrast to the "extremists" on the left and right.

## ‘50/50’ Agreements Preferred by Public

When Americans look at the political battles between President Obama and Republicans in Congress, they tend to say both sides should meet in the middle. For roughly half of Americans (49\%) the preferred outcome is to split the difference at exactly 50/50 - each getting about half of what they want.

This view holds across party lines. While some Democrats would prefer to see Obama get more of what he wants in negotiations with Republicans, $46 \%$ of Democrats and Democratic-leaners say the ideal outcome is 50/50. Exactly half of Republicans and Republican-leaners agree that splitting the difference is the right end result.

## Liberals, Conservatives Want Their Side to Get More of What It Wants

Source: 2014 Political Polarization in the American Public
Notes: Question asks respondents where, on a scale of zero to 100, Obama and Republican leaders should end up when addressing the most important issues facing the country. See topline for complete question wording. Ideological consistency based on a scale of 10 political values questions (see Appendix A).

PEW RESEARCH CENTER

But those who see the world through more ideological lenses have a very different perspective. Only about a third (34\%) of consistent liberals think of the ideal point as halfway between Obama and the Republicans. Instead, most (62\%) think that any deal between the two sides should be
closer to Obama's position than the GOP's position. And not by just a little bit: On average, consistent liberals say Obama should get two-thirds of what he wants, meeting congressional Republicans only one-third of the way. And $16 \%$ of consistent liberals think Obama should obtain $90 \%$ or more of what he wants in these deals.

Those on the right also are reluctant to see their side give ground. On average, consistent conservatives say that ideally, congressional Republicans should get $66 \%$ of what they want, while Obama should get just $34 \%$ of what he wants. Nearly a quarter ( $22 \%$ ) of consistent conservatives think that Republicans should get $90 \%$ or more of what they seek.

## Compromise in Principle vs. Compromise in Practice

In principle, most Americans want their political leaders to compromise. A 56\% majority prefers political leaders who "are willing to compromise," while $39 \%$ prefer leaders who "stick to their positions." And this preference has a decidedly ideological tilt: Consistent liberals overwhelmingly prefer leaders who compromise (by an 82\% to $14 \%$ margin), while consistent conservatives voice a preference for leaders who stick to their positions, by a $63 \%$ to $32 \%$ margin.

Despite liberals' stated preference for compromise, however, they are about as likely as conservatives to want political agreements that favor their side. Although $82 \%$ of consistent liberals prefer leaders who compromise, $62 \%$ say the optimal deal between Obama and the GOP should be closer to what Obama wants. Among consistent

## Consistent Liberals Like Compromise in Principle

Source: 2014 Political Polarization in the American Public Note: Ideological consistency based on a scale of 10 political values questions (see Appendix A).

PEW RESEARCH CENTER conservatives, there is less of a contrast: $57 \%$
say that when Republicans and Obama need to strike a deal, Republicans should get more of what they want. That's in line with the $63 \%$ majority who say they prefer leaders who stick to their positions.

## The Ideological "Center" Is Not Necessarily "Moderate"

The survey includes questions on a number of current policy proposals, relating to immigration, health care, abortion, gun control and other issues. Those on both sides of these issues were asked follow-up questions intended to test how far they would go in support of a policy position.

There is a tendency to assume that people at either end of the ideological scale are most likely to hold more extreme political views, yet this often is a flawed assumption. Many Americans may hold liberal or conservative values, yet do not consistently express very liberal or conservative opinions on issues. Conversely, being in the center of the ideological spectrum means only that a person has a mix of liberal and conservative values, not that they take moderate positions on all issues.

## Measuring Support for Far-Reaching Policy Proposals

This survey includes long-standing trend questions on several issues, including gun control, abortion, health care, immigration and entitlements. These measures capture attitudes about current debates, such as whether it is more important to control gun ownership or protect gun rights.

But we also tested opinions about proposals that are not a focus of today's political discussions. In the case of guns: how many Americans want to eliminate all restrictions on owning guns? Or alternatively, how many would support limiting gun ownership just to law enforcement personnel?

These are not ideas that typically draw support from political leaders on the left or right. Yet opinions about far-reaching proposals are revealing. Nearly a quarter of Americans take an all-or-nothing approach to gun ownership: 11\% favor no limits on gun ownership; 12\% believe no one except law enforcement personnel should be able to own guns.

The goal of this research is to determine the relationship between ideological consistency and opinions that, in the current political context, may seem extreme. In some cases, as with views on gun ownership, consistent conservatives are most likely to express such opinions; in others, such as in views on abortion and health care, liberals stand out. Yet on each issue tested, sizable minorities of those with mixed ideologically views express either extremely conservative or liberal opinions. The questions used for this analysis can be found in the survey topline.

## Gun Control

Take gun control as an example. In this survey, we update our long-standing trend on whether it is more important to protect gun rights or control gun ownership. Overall, $49 \%$ prioritize gun rights and $48 \%$ say it is more important to control gun ownership; these views are little changed from a year ago.

And to capture more detail on how far people are willing to go on this issue, each of these groups was asked a follow-up question. Those who favor gun rights were asked if there should be some restrictions - or no restrictions - on gun ownership. Those who prioritize gun control were asked if most people should be allowed to own guns within limits, or if only law enforcement personnel should be allowed to own guns. Overall, most Americans expressed what might be considered a "moderate" view: They either prioritize gun rights but with some limits, or they prioritize gun control but support gun ownership with some limits. Smaller numbers take more unyielding positions: $11 \%$ support no restrictions on gun ownership, while about as many (12\%) favor, in effect, a ban on personal gun ownership.

## Conservatives Most Likely to Support No Limits on Gun Ownership

Is it more important to ...
Control Gun Ownership Protect Gun Rights

[^2]Opinions on the threshold gun control question are deeply divided along ideological lines: 96\% of consistent conservatives say it is more important to protect gun rights, while $81 \%$ of consistent liberals say it is more important to control gun ownership.

Compared with this near-unanimity on general priorities, all-or-nothing proposals on guns attract relatively modest support from the right and left. Consistent conservatives are most likely to favor complete freedom to own guns. Still, that is the minority view: $60 \%$ favor gun rights but with some limits on gun ownership, while $34 \%$ say there should be no limits at all.

And on the other side, just $16 \%$ of consistent liberals say that only law enforcement officials should have guns; $64 \%$ say they support gun control but that most people should still be able to own guns, within limits.

Notably, about one-in-five (22\%) of those with ideologically mixed views supports one of these positions. Their views are divided: $13 \%$ favor a virtual ban on people owning guns, while $9 \%$ would place no limits on gun ownership. Thus, those in the center ideologically are no less likely than those on the left, and only somewhat less likely than those on the right, to hold all-or-nothing views about gun ownership.

## Immigration: Beyond Path to Citizenship

The congressional debate on immigration reform has centered on whether a "path to citizenship" for unauthorized immigrants in the U.S. should be included in legislation. Public opinion on this issue is lopsided, with $76 \%$ saying immigrants in the U.S. illegally should be eligible for citizenship if they meet certain requirements, while just $23 \%$ are opposed.

Yet the issue remains contentious, at least in part because opposition goes significantly beyond the view that unauthorized immigrants should simply be denied an opportunity to become citizens. Most of those who oppose a path to citizenship - $17 \%$ out of the $23 \%$ - say there should be a national law enforcement effort to deport all immigrants who are living in the U.S. illegally.

## Most Who Oppose Path to Citizenship Favor Deporting All Here IIlegally

Immigrants now living in the U.S. illegally should ...

Source: 2014 Political Polarization in the American Public
Notes: "Don't know" responses not shown. Ideological consistency based on a scale of 10 political values questions (see Appendix A)
PEW RESEARCH CENTER

Support for deportation of all unauthorized immigrants is relatively high among consistent conservatives, $41 \%$ of whom take this position. But it draws support elsewhere as well: $28 \%$ of mostly conservative Americans take this view, as do $19 \%$ of those who show neither a conservative nor a liberal leaning.

On the other side of the issue, those who back a path to citizenship were asked if unauthorized immigrants who meet certain conditions should be eligible for citizenship right away or only after a period of time. Most Americans (54\%) think eligibility should come only after a period of time, while a much smaller share ( $20 \%$ ) believes that unauthorized immigrants who meet the requirements should be eligible for citizenship right away.

As with views of deportation, opinions about immediate eligibility are strongly associated with ideology; $45 \%$ of consistent liberals favor immediate citizenship. But many others hold this view too, including $18 \%$ of those who have virtually no ideological predisposition, and $7 \%$ of consistent conservatives.

All told, $37 \%$ of non-ideological Americans support drastic changes in America's immigration policies: $19 \%$ favor deportation of all unauthorized immigrants and $18 \%$ support immediate citizenship if conditions are met. That's only slightly lower than the share of consistent liberals and consistent conservatives who favor such major changes ( $46 \%$ and $47 \%$, respectively).

## Most Favor Middle Ground on Abortion

Abortion remains one of the most divisive issues in American politics: The current survey finds $51 \%$ saying it should be legal in all or most cases, while $43 \%$ say it should be illegal in all or most cases, a balance of opinion little changed over the past decade or more.

Yet abortion also is an issue on which the public generally supports a middle-ground approach. Most of those who support legal abortion say there should be some restrictions on abortion (31\% of the public answers this way); just $19 \%$ say there should be no restrictions at all on abortion. Similarly, among abortion opponents, twice as many say abortion should be allowed "in some situations" as say it should "never be allowed" ( $28 \%$ of the public vs. 14\%).

## Liberals Most Likely to Favor No Restrictions on Abortion

Abortion should be ...

Source: 2014 Political Polarization in the American Public
Notes: "Don't know" responses not shown. Ideological consistency based on a scale of 10 political values questions (see Appendix A)
PEW RESEARCH CENTER

Consistent liberals are far more likely than other groups to say there should be no restrictions on abortion. In fact, those who favor legal abortion ( $88 \%$ ) are evenly divided ( $44 \%-43 \%$ ) over whether there are some situations in which abortion should be restricted or there should be no restrictions on abortion.

By comparison, only about one-in-five (21\%) consistent conservatives support a total ban on abortions. In part, this reflects the fact that conservatives are less likely to oppose legal abortion than liberals are to support it ( $73 \%$ vs. $88 \%$ ). Yet even among consistent conservatives who oppose abortion, most say it should be allowed in some situations; $51 \%$ of consistent conservatives oppose abortion, but say it should be allowed in some circumstances, more than double the share who thinks it should never be permitted.

While opinions about abortion are correlated with ideology, many Americans who are not ideologically aligned still express unyielding views on this issue. Among those who hold a mixture of liberal and conservative opinions, $31 \%$ see the issue in black-or-white terms ( $14 \%$ say it should never be allowed, $16 \%$ say it should face no restrictions at all).

## Conflicted Views of NSA Surveillance

The government's surveillance program is an unusual issue in that it divides members of both parties. The current survey finds that $54 \%$ of Americans disapprove of the government's collection of telephone and internet data as part of anti-terrorism efforts, while $41 \%$ approve. But most of those who disapprove ( $38 \%$ of all Americans) say the National Security Agency should be allowed to collect some limited information. Similarly, most who approve of the program ( $26 \%$ of all Americans) think there should still be some limits on what the NSA collects.

## On NSA, 30\% Either Want No Limits on Surveillance or Say ‘Shut It Down’

Opinion about gov't data collection of telephone and internet data as part of anti-terrorism efforts...

Source: 2014 Political Polarization in the American Public
Notes: "Don't know" responses not shown. Ideological consistency based on a scale of 10 political values questions (see Appendix A) PEW RESEARCH CENTER

Still, a minority of Americans - 30\% overall - view the surveillance issue in essentially all-ornothing terms. Fifteen percent not only approve of the program, but say "the NSA should be allowed to collect whatever data it needs." And an identical $15 \%$ take the opposite view, not only disapproving of the program, but saying "the NSA should be prevented from collecting any data about U.S. citizens."

Three-quarters of consistent conservatives (75\%), as well as $53 \%$ of consistent liberals, disapprove of the government's surveillance program. Yet conservatives and liberals are not any more likely than others to view the issue of government surveillance in stark terms. Among consistent liberals, as many say the NSA program should be prevented from collecting any data about U.S. citizens as say it should be able to collect whatever it feels it needs ( $12 \%$ and $13 \%$, respectively.) Nearly a quarter (24\%) of consistent conservatives want to shut down the program, while $7 \%$ say it should be unfettered.

And these views aren't limited to the ideologically oriented. Those with mixed ideological views are about as likely to have a relatively sweeping preference about government surveillance: $16 \%$ say, in effect, there should be no limits on the NSA's data-collection program; $14 \%$ think it should not be able to collect any data on U.S. citizens.

## Government's Role in Health Care

The idea of a single-payer health care system - in which the government pays for all health care costs - has long been a dream of many liberals. But when Congress took up health care reform in 2009, Democrats united behind a market-based proposal - what became the Affordable Care Act - which was seen as more politically feasible.

The current survey finds that government involvement in the health care system continues to draw extensive liberal support: Fully $89 \%$ of consistent liberals say it is the responsibility of the federal government to make sure all Americans have health care coverage. And roughly half - $54 \%$ - think health insurance "should be provided through a single national health insurance system run by the government."

Few Conservatives Favor No Government Involvement in Health Care

Source: 2014 Political Polarization in the American Public
Notes: "Don't know" responses not shown. Ideological consistency based on a scale of 10 political values questions (see Appendix A)
PEW RESEARCH CENTER

Overall, the public is divided over how far the government should go in providing health care. About half ( $47 \%$ ) say the government has a responsibility to make sure all Americans have health care coverage, while $50 \%$ say that is not the responsibility of the federal government.

Those who believe the government does have a responsibility to ensure health coverage were asked if health insurance should be provided through a mix of private insurance companies and the government, or if the government alone should provide insurance. The single-payer option was supported by $21 \%$, while about as many ( $23 \%$ ) favor a mix of public and private insurance.

On the other side of the issue, while half say it isn't the government's responsibility to make sure all have health care coverage, relatively few want the government to get out of the health care system entirely. Rather, $43 \%$ say it's not the government's responsibility to ensure health care coverage for all, but believe the government should "continue programs like Medicare and Medicaid for seniors and the very poor." Only 6\% of Americans go so far as to say the government "should not be involved in providing health insurance at all."

Even among consistent conservatives, there is minimal support for the government having absolutely no role in providing health care. Three-quarters of consistent conservatives (75\%) say the government should continue Medicare and Medicaid while just 20\% think the government should not be involved in providing health insurance.

## Social Security: Wide Opposition to Benefit Cuts

The public, particularly younger Americans, are deeply skeptical about their chances for ever receiving full Social Security benefits when they retire. Among the overall public, just 14\% expect that Social Security will have sufficient resources to provide the current level of benefits; $39 \%$ say there will be enough money to provide reduced benefits and $43 \%$ think that, when they retire, the program will be unable to provide any benefits.

Despite the bleak public perceptions about the future of Social Security, most Americans (67\%) say that benefits cuts should not be an option when thinking about Social Security's long-term future. Just $31 \%$ say some reductions for future retirees need to be considered.

When the majority who oppose benefits cuts is asked if the program should be expanded, or kept as it is, most support the status quo. Nearly four-in-ten Americans (37\%) say benefits should remain as they are, yet roughly a quarter (27\%) favor Social Security covering "more people with greater benefits."

Among those who say benefits reductions should be considered, very few (just $6 \%$ of the public overall) think Social Security should be phased out as a government program. Far more ( $24 \%$ of the public) think benefits should be maintained but at a reduced level.

Source: 2014 Political Polarization in the American Public
Notes: "Don't know" responses not shown. Ideological consistency based on a scale of 10 political values questions (see Appendix A)
PEW RESEARCH CENTER

There is substantial agreement across the ideological spectrum on the question of whether benefit reductions should be considered: Majorities in every group, including 59\% of consistent conservatives, say they should not. Support for expanded benefits is nearly as high among those with mixed ideological views ( $29 \%$ favor) as it is among consistent liberals (31\%).

The prospect of phasing out Social Security draws little support. No more than about one-in-ten in any group favors phasing out Social Security as a government program.

## Section 5: Political Engagement and Activism

The 'U-Shape’ of Political Activism; Higher at Ideological Extremes, Lower in Center<br><br>Percent who contributed to a political<br>candidate or group in the past two years

Source: 2014 Political Polarization in the American Public
Note: Bars represent the level of participation at each point on a 10 question scale of ideological consistency. Figures are reported on the five ideological consistency groups used throughout the report (see Appendix A).
PEW RESEARCH CENTER

Political engagement can take on many different forms, including voting, contributing money to a candidate or political group, working or volunteering for a campaign, attending a campaign event or contacting an elected official. But on every measure of engagement, political participation is strongly related to ideology and partisan antipathy; those who hold consistently liberal or conservative views, and who hold strongly negative views of the other political party, are far more likely to participate in the political process than the rest of the nation.

This results in a consistent "U-shaped" pattern, with higher levels of engagement on the right and left of the ideological spectrum, and lower levels in the center. But the shape of the curve varies across different types of participation. For example, when it comes to voting, the peak is much higher on the right than on the left: $78 \%$ of those who are consistently conservative say they always vote, compared with $58 \%$ of consistent liberals. But on both sides, the propensity to vote falls among those whose ideological views are more mixed. At the center, just $39 \%$ of those who hold a mix of liberal and conservative values describe themselves as regular voters. That is half the rate of consistent conservatives.

When it comes to who makes political donations, these disparities are even more pronounced. Nationwide, $15 \%$ of adults report having made a donation to a candidate running for public office or to a group working to elect a candidate in the last two years. But donation rates are roughly double the national average among ideologically consistent liberals (31\% have donated money) and conservatives ( $26 \%$ ). Just $8 \%$ of those with mixed ideological views have donated to a candidate or campaign in the past two years.

The fact that the peak donation rate is slightly higher on the left than on the right might be surprising, but this includes more small donations from liberals than conservatives. Just $4 \%$ of Americans say their contributions in the past two years have added up to $\$ 250$ or more, including a roughly equal number of consistent liberals ( $7 \%$ ) and consistent conservatives (8\%).

Regardless of the amount, there is an ideological skew in campaign donations: Put together, people on the ideological right and left are considerably more likely than those who are ideologically mixed to have made a campaign donation in the past two years ( $29 \%$ vs. $8 \%$ ) or to have donated $\$ 250$ or more ( $7 \%$ vs. $2 \%$ ).

This pattern is also evident across other types of political engagement, including contacting an elected official, attending a campaign event, and working or volunteering for a candidate or campaign. In each instance, people at the ideological left and right are more than twice as likely to be active participants in the political process compared with those who hold a roughly equal mix of liberal and conservative values.

## Political Activism on the Left and the Right

In the past two years, percent who have ...

Source: 2014 Political Polarization in the American Public
Note: Bars represent the level of participation at each point on a 10 question scale of ideological consistency. Figures are reported on the five ideological consistency groups used throughout the report (see Appendix A).
PEW RESEARCH CENTER

To be sure, there are many factors that correlate strongly with voting, engagement and political activism: Age, education and income are among the most prominent. Yet even after controlling for these and other demographic factors known to be associated with higher levels of participation, the relationship between ideological consistency and engagement persists.

## Partisan Antipathy and Political Engagement

The current political landscape is marked not just by increased ideological uniformity (See section 1), but also by growing political animosity, as partisans see the other side in starkly negative terms (See section 2). Today, nearly all Democrats and Republicans - including those who only lean toward one or the other political party - view the other party unfavorably, with a steep increase in the share with very unfavorable views.

## Partisan Animosity and Political Participation

Measures of political participation, by views of the other party

Source: 2014 Political Polarization in the American Public
Notes: Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents (see Appendix B). Those who have a favorable view of the other party not shown.
PEW RESEARCH CENTER

Holding a strongly negative view of one's political adversaries is also a substantial factor driving political engagement. Among both Republicans and Democrats, those who see the other side in very unfavorable terms are significantly more likely to be regular voters, to make campaign donations, and to participate in the political process in other ways.

For example, among Republicans, 68\% of those who have a very negative view of the Democratic Party say they always vote, compared with only half of those with a mostly negative opinion. Republicans who strongly dislike the Democratic Party are much more likely to have made a political donation in the past two years ( $23 \%$ vs. $12 \%$ ), to have contacted an elected official ( $42 \%$ vs. $30 \%$ ), or to have volunteered or worked for a campaign ( $9 \%$ vs. $5 \%$ ).

The same pattern holds among Democrats, though to a slightly lesser extent; $58 \%$ of Democrats who have a very unfavorable view of the Republican Party say they always vote, compared with $46 \%$ of those who have a mostly unfavorable view. And Democrats who strongly dislike the Republican Party are more likely to have made a political donation in the past two years ( $22 \%$ vs. $14 \%$ ) to have attended a campaign event ( $20 \%$ vs. $14 \%$ ) and to have volunteered or worked for a campaign ( $12 \%$ vs. $8 \%$ ).

## Polarization and the Primaries

All of these patterns hold when it comes to participating in party primaries as well. About four-in-ten (43\%) Republicans who have a very unfavorable view of the Democratic Party say they always vote in primaries, compared with $27 \%$ of those with less negative views. The same is true on the Democratic side; those with deeply negative views are 12 points more likely to say they always participate in the primaries ( $33 \%$ vs. $21 \%$ ).

Similarly, most consistent conservatives (54\%) say they always vote in primaries, higher than the $34 \%$ of consistent liberals who say the same. But both of these groups are far more likely to vote than are people with a roughly even mix of liberal and conservative views, just $18 \%$ of whom say they always vote in primaries.

Ideological Consistency and Primary Voting

Note: Bars represent the level of participation at each point on a 10 question scale of ideological consistency. Figures are reported on the five ideological consistency groups used throughout the report (see Appendix A).
PEW RESEARCH CENTER

## Ideology and Antipathy Add Up

To be sure, those who are ideologically consistent - on both ends of the spectrum tend to have a deeper dislike of the opposing party than those who are less ideological. But even after controlling for ideology, antipathy toward the other party remains a strong predictor of participation in political activities. And those who are both ideologically consistent and have a very negative view of the other party are even more likely to be engaged. Fully $83 \%$ of Republicans in this category say they always vote, compared with 70\% of consistently conservative Republicans who say they have a mostly unfavorable view of the Democratic Party. Democrats who are consistently liberal and have a very negative opinion of the Republican Party are 19 percentage points more likely to say they always vote than consistently liberal Democrats who have a less negative view of the GOP.

## More Politically Engaged, But Not a Majority

Because political participation and activism are so much higher among the more ideologically polarized elements of the population, these voices are over-represented in the political process. Even so, they do not make up the majority of voters, donors or campaign activists.

Nationwide, $21 \%$ are either consistently liberal or consistently conservative in their political values. But these people make up a larger share of the electorate $-28 \%$ of people who say they always vote and $34 \%$ of those who always vote in primaries.

This pattern is even stronger at higher levels of activism. Consistent liberals and conservatives make up $41 \%$ of the people who have made a campaign donation over the past two years - double their presence in the public at large.

## Despite Higher Engagement, Ideological Left \& Right a Minority of Voters, Activists

Ideological composition of the public, as well as key groups within the electorate

PEW RESEARCH CENTER

Yet even here, those with ideological viewpoints are not the only participants in the process, as most campaign donors express mixed views or only mostly liberal or conservative views.

In short, while the left and the right may speak louder in the political process, they do not necessarily drown out other elements of the public entirely. And this may be one reason why, even in lower-turnout primaries, the more ideological candidates do not always carry the day.

## For Further Reading

This study draws upon a rich set of existing research on the topics of political polarization and ideological consistency in the American public, from both academics and political journalists. The books and articles listed below (by no means a comprehensive list) address many of the aspects of polarization discussed in this report and may be a good starting point for those looking to dive deeper into the topic.

In addition, The Washington Post's Monkey Cage blog series about political polarization, which ran earlier this year, is a useful primer on the topic. It includes entries from several of the authors below, as well as many other scholars on the topic. See the bottom of the last piece in the series for links to the full list of entries.

## Appendix A: The Ideological Consistency Scale

Throughout this report we utilize a scale composed of 10 questions asked on Pew Research Center surveys going back to 1994 to gauge the extent to which people offer mostly liberal or mostly conservative views across a range of political value dimensions. In short, while there is no ex-ante reason for people's views on diverse issues such as the social safety net, homosexuality and military strength to correlate, these views have a traditional "left/right" association, and the scale measures this growing correlation over time.

## Items in the Ideological Consistency Scale

| Question \# | Conservative Position | Liberal Position |
| :---: | :---: | :---: |
| Q25a | Government is almost always wasteful and inefficient | Government often does a better job than people give it credit for |
| Q25b | Government regulation of business usually does more harm than good | Government regulation of business is necessary to protect the public interest |
| Q25c | Poor people today have it easy because they can get government benefits without doing anything in return | Poor people have hard lives because government benefits don't go far enough to help them live decently |
| Q25d | The government today can't afford to do much more to help the needy | The government should do more to help needy Americans, even if it means going deeper into debt |
| Q25f | Blacks who can't get ahead in this country are mostly responsible for their own condition | Racial discrimination is the main reason why many black people can't get ahead these days |
| Q25g | Immigrants today are a burden on our country because they take our jobs, housing and health care | Immigrants today strengthen our country because of their hard work and talents |
| Q25i | The best way to ensure peace is through military strength | h Good diplomacy is the best way to ensure peace |
| Q25n | Most corporations make a fair and reasonable amount of profit | Business corporations make too much profit |
| Q50r | Stricter environmental laws and regulations cost too many jobs and hurt the economy | Stricter environmental laws and regulations are worth the cost |
| Q50u | Homosexuality should be discouraged by society | Homosexuality should be accepted by society |

## PEW RESEARCH CENTER

The individual questions in the scale are shown here. The topline shows the long term trends on these items, and section 1 of the report tracks the partisan divides on each question since 1994.

Individual questions were recoded as follows: "- 1 " for a liberal response, "+1" for a conservative response, " 0 " for other (don't know/refused/volunteered) responses. As a result, scores on the full scale range from - 10 (liberal responses to all 10 questions) to +10 (conservative responses to all 10 questions). For analytical purposes, respondents are grouped into one of five categories, which are used throughout the report, as follows:

- Consistently conservative ( +7 to +10 )
- Mostly conservative ( +3 to +6 )
- Mixed (-2 to +2)
- Mostly liberal (-6 to -3)
- Consistently liberal (-10 to -7)

To put these figures in perspective, a respondent offering five liberal and five conservative views, or six of one and four of the other, would be considered as having "mixed" ideological views. Someone offering seven conservative and three liberal responses, or eight and two, would be considered "mostly conservative." And any respondents offering nine conservative and one liberal response, or all ten conservative, would be considered "consistently conservative." Since some people do not answer every question, other combinations

| Distribution of the Ideological Consistency Scale |  |  |  |  |  |

PEW RESEARCH CENTER are possible.

The graphics in section 1 (ideological consistency) and section 2 (engagement) use the full set of points on the scale (note that graphics in section 1 are smoothed by showing the average of two consecutive points on the scale).

Any ideological index has its limitations because defining what it means to be liberal and conservative is inherently controversial. As we have illustrated elsewhere, American political thinking is multidimensional, and any effort to "flatten" ideology to a single left/right dimension may miss this rich texture.

But our purpose here is to study the concept of ideological "consistency" - or the share of Americans who hold liberal or conservative views across a range of values dimensions; this is also sometimes referred to as "ideological constraint" or "ideological sorting" by political scientists and other researchers.

Because the focus is on change over time, we are limited to a set of questions that were invented 20 years ago, and this creates imperfections. For example, the elements of the index do not cover more recent value divides, such as surveillance or terrorism.

In addition, while the range of the scale (from -10, all liberal responses, to +10 , all conservative responses) remains the same throughout the period of study, the "center" of the American public does shift. For instance, in 2014 the mean on the scale is -o.6, slightly to the left; in 1994 the mean score was slightly to the right (+o.6). To a large extent, this shift reflects an overall societal shift to the left on two issues: homosexuality and immigration.

This overall shift does not necessarily mean that the average American is more liberal than conservative because the mean is now less than zero. But it does mean that people on the liberal end of the scale are now somewhat closer to the center of the scale than are those at the conservative end. As a result, the relative sizes of the "consistently liberal" and "consistently conservative" groups are not strictly comparable. That is, because of the scale's construction, we would not definitively conclude that there are more consistent liberals (12\%) than consistent conservatives (9\%) today. Yet the changes over time-e.g., the overall increase in the proportion who are consistently liberal or conservative-and the differences in attitudes and behaviors across groups, are robust even when alternative definitions that account for the scaling differences are used.

## Appendix B: Why We Include Leaners With Partisans

Throughout this report, the analysis of partisan attitudes combines both those who identify with and those who lean toward the parties. In many respects, those who lean toward the parties-even if they identify as independent-have attitudes and behaviors that are very similar to those of partisans. That most leaners are "closet partisans" has been observed by many political scientists (see here and here for a few recent examples of this discussion). And we have remarked on this in prior Pew Research Center studies, including in our 2012 Values poll-see the end of section one of the Values report for a discussion.

And this pattern is again evident when it comes to the two dimensions of polarization discussed in this report: ideological consistency and partisan acrimony.

## Ideological Consistency: Leaners Look Much Like Partisans

Source: 2014 Political Polarization in the American Public.
Note: Ideological consistency based on a scale of 10 political values questions (See Appendix A).
PEW RESEARCH CENTER

On the first, discussed in section 1, leaners' ideological positions largely overlap those of partisans. And as Republicans have become more conservative, and Democrats more liberal, leaners have moved along with them.

Over the last two decades, Republican leaners have been, on average, just slightly less conservative than Republicans overall. For instance, today, $57 \%$ of Republican identifiers and $47 \%$ of Republican leaners are consistently or mostly conservative. By contrast, just 5\% of Democratic leaners are mostly or consistently conservative (see Appendix A for a discussion of the ideological consistency scale).

## Ideological Consistency: Leaners More Similar to Partisans Than Other Independents

$\%$ consistently or mostly conservative $\quad \%$ consistently or mostly liberal

Source: 2014 Political Polarization in the American Public.
Note: Ideological consistency based on a scale of 10 political values questions (see Appendix A).
PEW RESEARCH CENTER

The positions of those who identify as Democrats and those who lean toward the Democratic Party are nearly identical over this time period: $57 \%$ of Democrats and $54 \%$ of Democratic leaners are consistently or mostly liberal today. When the two groups did diverge in 2004, Democratic leaners were somewhat more likely than Democrats to be to the left of center.

And the dislike of the opposing party discussed in section 2 is almost as acute among leaners as partisans. Today, nearly as many Republican leaners (40\%) as Republicans (46\%) express very unfavorable opinions of the Democratic Party, and the steep growth in deeply negative views is seen in both groups.

On the left, Democratic leaners are somewhat less likely than Democratic identifiers to hold strongly negative views of Republicans ( $42 \%$ of Democrats and $30 \%$ of Democratic leaners have a very unfavorable opinion of the GOP). Still, the overall growth in antipathy is just as pronounced among leaners as among Democrats.

## Partisan Antipathy: Leaners Look Much Like Partisans

\% with very unfavorable view of Republican Party

\% with very unfavorable view of Democratic Party

Source: 2014 Political Polarization in the American Public.
PEW RESEARCH CENTER

Overall, it would have been possible to combine these two groups of "leaners" into a single "independent" category to contrast with Republicans and Democrats (that line is plotted in the middle of the above graphics). But combining these two dramatically different groups would be misleading; these are two groups that have little in common with each other, and far more in common with self-identified partisans.

## About the Surveys

The data in this report are based on two independent survey administrations with the same randomly selected, nationally representative group of respondents. The first is the center's largest survey on domestic politics to date: the 2014 Political Polarization and Typology Survey, a telephone survey of just over 10,000 Americans. The second involved impaneling a subset of these respondents into the newly created American Trends Panel and following up with them via a survey conducted by web and telephone. The two surveys are described separately, in further detail, in the section that follows.

## Overview of Telephone Survey Methodology

Most of the analysis in this report is based on telephone interviews conducted January 23-March 16, 2014 among a randomly selected national sample of 10,013 adults, 18 years of age or older, living in all 50 U.S. states and the District of Columbia ( 5010 respondents were interviewed on a landline, and 5003 were interviewed on a cellphone, including 2,649 who had no landline telephone). The survey was conducted under the direction of Abt SRBI. A combination of landline and cellphone random digit dial samples were used; both samples were provided by Survey Sampling International. Interviews were conducted in English and Spanish. Respondents in the landline sample were selected by randomly asking for the youngest adult male or female who was at home at the time of the call. Interviews in the cell sample were conducted with the person who answered the phone, if that person was an adult 18 years of age or older. For detailed information about our survey methodology, see http://people-press.org/methodology/.

Data collection was divided equally into three phases (A, B, and C) with independent samples, non-overlapping interview dates and separate weighting. The questionnaire for each phase contained a core set of measures of political attitudes and values, political engagement and demographic characteristics, along with a set of unique questions about issues, lifestyle, media use and other topics covered in this series of reports. Additionally, most respondents to the survey were invited to join the newly created Pew Research Center's American Trends Panel, described below.

The combined landline and cellphone sample is weighted using an iterative technique that matches gender, age, education, race, Hispanic origin and nativity and region to parameters from the 2012 Census Bureau's American Community Survey and population density to parameters from the 2010 U.S. Census. The sample also is weighted to match current patterns of telephone status (landline only, cellphone only, or both landline and cellphone), based on extrapolations from the 2013 National Health Interview Survey. The weighting procedure accounts for the fact that respondents with both landline and cellphones have a greater probability of being included in
the combined sample and adjusts for household size among respondents with a landline phone. Sampling errors and statistical tests of significance take into account the effect of weighting.

The following table shows the unweighted sample sizes and the error attributable to sampling that would be expected at the $95 \%$ level of confidence for different groups in the survey:

| Group | Total sample for all three phases <br> Unweighted <br> sample size | Plus or minus ... | Unweighted <br> sample size | Single phase |
| :--- | :---: | :---: | :---: | :---: |
| Total sample | 10,013 | 1.1 percentage points | 3,335 | 2.0 percentage points |
|  |  |  |  |  |
| Republican/lean Republican | 4,177 | 1.7 percentage points | 1,340 | 3.1 percentage points |
| Very unfav view of Dem party | 1,903 | 2.6 percentage points | 604 | 4.6 percentage points |
| Mostly unfav view of Dem party | 1,607 | 2.8 percentage points | 514 | 5.0 percentage points |
| Democrat/lean Democrat | 4,657 | 1.7 percentage points | 1,517 | 2.9 percentage points |
| Very unfav view of Rep party | 1,913 | 2.6 percentage points | 589 | 4.7 percentage points |
| Mostly unfav view of Rep party | 1,901 | 2.6 percentage points | 612 | 4.6 percentage points |
|  |  |  |  |  |
| Consistently conservative | 1,078 | 3.4 percentage points | 347 | 6.1 percentage points |
| Mostly conservative | 1,932 | 2.6 percentage points | 625 | 4.5 percentage points |
| Mixed | 3,469 | 1.9 percentage points | 1,127 | 3.4 percentage points |
| Mostly liberal | 2,066 | 2.5 percentage points | 659 | 4.4 percentage points |
| Consistently liberal | 1,468 | 3.0 percentage points | 485 | 5.1 percentage points |

Sample sizes and sampling errors for other subgroups are available upon request.

In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.

## Telephone Survey Methodology in Detail

## Sample Design

A combination of landline and cellphone random digit dial samples were used; both samples were provided by Survey Sampling International. Landline and cellphone numbers were sampled to yield an equal number of landline and cellphone interviews.

The design of the landline sample ensures representation of both listed and unlisted numbers (including those not yet listed) by using random digit dialing. This method uses random generation of the last two digits of telephone numbers selected on the basis of the area code, telephone exchange and bank number. A bank is defined as 100 contiguous telephone numbers, for example 800-555-1200 to 800-555-1299. The telephone exchanges are selected to be proportionally stratified by county and by telephone exchange within the county. That is, the number of telephone numbers randomly sampled from within a given county is proportional to that county's share of telephone numbers in the U.S. Only banks of telephone numbers containing one or more listed residential numbers are selected.

The cellphone sample is drawn through systematic sampling from dedicated wireless banks of 1,000 contiguous numbers and shared service banks with no directory-listed landline numbers (to ensure that the cellphone sample does not include banks that are also included in the landline sample). The sample is designed to be representative, both geographically and by large and small wireless carriers.

Both the landline and cell samples are released for interviewing in replicates, which are small random samples of each larger sample. Using replicates to control the release of telephone numbers ensures that the complete call procedures are followed for all numbers dialed. The use of replicates also improves the overall representativeness of the survey by helping to ensure that the regional distribution of numbers called is appropriate.

## Respondent Selection

Respondents in the landline sample were selected by randomly asking for the youngest male or female, 18 years of age or older who was at home at the time of the call (for half of the households interviewers ask to speak with the youngest male first, and for the other half the youngest female). If there is no eligible person of the requested gender at home, interviewers ask to speak with the youngest adult of the opposite gender now at home. This method of selecting respondents within households improves participation among young people, who are often more difficult to interview
than older people because of their lifestyles, but this method is not a random sampling of members of the household.

Unlike a landline phone, a cellphone is assumed in Pew Research polls to be a personal device. Interviewers ask if the person who answers the cellphone is 18 years of age or older to determine if the person is eligible to complete the survey; interviewers also confirm that the person is not driving and is in a safe place. For those in the cell sample, no effort is made to give other household members a chance to be interviewed. Although some people share cellphones, it is still uncertain whether the benefits of sampling among the users of a shared cellphone outweigh the disadvantages.

## Interviewing

Interviewing was conducted under the direction of Abt SRBI. Interviews were conducted in English and Spanish. Data collection was divided equally into three phases (A, B and C) with independent samples, non-overlapping interview dates and separate weighting. The questionnaire for each phase contained a core set of measures of political attitudes and values, political engagement and demographic characteristics, along with a set of unique questions about issues, lifestyle, media use and other topics covered in this series of reports.

As many as seven attempts were made to complete an interview at every sampled landline and cellphone number. Calls were staggered over times of day and days of the week (including at least one daytime call) to maximize the chances of making contact with a potential respondent. An effort was made to recontact most interview breakoffs or refusals to attempt to convert them to completed interviews. People reached on cellphones were offered $\$ 5$ compensation for the minutes used to complete the survey. Additionally, most respondents to the survey were invited to join the newly created Pew Research Center's American Trends Panel (see below).

Overall, the response rate was $11.2 \%$ for the landline sample and $9.8 \%$ for the cell sample. The response rate is the percentage of known or assumed residential households for which a completed interview was obtained, and is computed using the American Association for Public Opinion Research's method for Response Rate $3\left(\mathrm{RR}_{3}\right)$ as outlined in their Standard Definitions.

## Weighting

The landline sample is first weighted by household size to account for the fact that people in larger households have a lower probability of being selected. In addition, the combined landline and cellphone sample is weighted to adjust for the overlap of the landline and cell frames (since people
with both a landline and cellphone have a greater probability of being included in the sample), including the relative size of each frame and each sample.

The sample is then weighted to population parameters using an iterative technique that matches gender, age, education, race, Hispanic origin and nativity, region, population density and telephone usage. The population parameters for gender, age, education, race/ethnicity and region are from the Census Bureau's 2012 American Community Survey (ACS) one-year estimates, and the parameter for population density is from the 2010 U.S. Census. The parameter for telephone usage (landline only, cellphone only, both landline and cellphone) is based on extrapolations from the 2013 National Health Interview Survey. The specific weighting parameters are: gender by age, gender by education, age by education, race/ethnicity (including Hispanic origin and nativity), region, density and telephone usage; non-Hispanic whites are also balanced on age, education and region. The weighting procedure simultaneously balances the distributions of all weighting parameters. The final weights are trimmed to prevent individual cases from having a disproportionate influence on the final results.

Weighting cannot eliminate every source of nonresponse bias. Nonetheless, properly-conducted public opinion polls have a good record of obtaining unbiased samples.

## Sampling Error

Sampling error results from collecting data from some, rather than all, members of the population. The 2014 Political Polarization and Typology Survey of 10,013 adults had a margin of sampling error of plus or minus 1.1 percentage points with a $95 \%$ confidence interval. This means that in 95 out of every 100 samples of the same size and type, the results we obtain would vary by no more than plus or minus 1.1 percentage points from the result we would get if we could interview every member of the population. Thus, the chances are very high ( 95 out of 100) that any sample we draw will be within 1.1 points of the true population value. The margins of error reported and statistical tests of significance are adjusted to account for the survey's design effect, a measure of how much efficiency is lost from the weighting procedures.

Many of the findings in this report are based on parts of the sample, such as the interviews in a single phase of the study (approximate sample size 3,333) or on subgroups such as Democrats or women. The sampling error for these will be larger than for the total sample. Sampling error for frequently-cited subgroups and for the individual phases are reported above.

## The American Trends Panel Survey

The American Trends Panel (ATP), created by the Pew Research Center and first introduced in this report, is a nationally representative panel of randomly selected U.S. adults living in households. Respondents who self-identify as internet users (representing $89 \%$ of U.S. adults) participate in the panel via monthly self-administered Web surveys, and those who do not use the internet participate via telephone or mail. The panel is being managed by Abt SRBI.

Data in this report are drawn from the first wave of the panel, conducted March 19-April 29, 2014 among 3,308 respondents ( 2,901 by Web and 407 by phone). The margin of sampling error for the full sample of 3,308 respondents is plus or minus 2.2 percentage points.

All current members of the American Trends Panel were originally recruited from the 2014 Political Polarization and Typology Survey, a large ( $\mathrm{n}=10,013$ ) national landline and cellphone random digit dial (RDD) survey conducted January 23rd to March 16th, 2014, in English and Spanish. At the end of that survey, respondents were invited to join the panel. The invitation was extended to all respondents who use the internet (from any location) and a random subsample of respondents who do not use the internet. ${ }^{1}$

Of the 10,013 adults interviewed, 9,809 were invited to take part in the panel. A total of 5,338 agreed to participate and provided either a mailing address or an email address to which a welcome packet, a monetary incentive and future survey invitations could be sent. Panelists also receive a small monetary incentive after participating in each wave of the survey.

The ATP data were weighted in a multi-step process that begins with a base weight incorporating the respondents' original survey selection probability and the fact that some panelists were subsampled for invitation to the panel. Next, an adjustment was made for the fact that the propensity to join the panel varied across different groups in the sample. The final step in the weighting uses an iterative technique that matches gender, age, education, race, Hispanic origin, telephone service, population density and region to parameters from the U.S. Census Bureau's 2012 American Community Survey. It also adjusts for party affiliation using an average of the three most recent Pew Research Center general public telephone surveys, and for internet use using as a parameter a measure from the 2014 Survey of Political Polarization. Sampling errors and statistical tests of significance take into account the effect of weighting.

[^3]The Web component of the first wave had a response rate of $61 \%$ (2,901 responses among 4,753 Web-based individuals enrolled in the panel); the telephone component had a response rate of $70 \%$ (407 responses among 585 non-Web individuals enrolled in the panel). Taking account of the response rate for the 2014 Survey of Political Polarization (10.6\%), the cumulative response rate for the first ATP wave is $3.6 \%$.

## QUESTIONS B2-B3 HELD FOR FUTURE RELEASE

## QUESTIONS B4-B5 PREVIOUSLY RELEASED

## ASK ALL PHASE A:

Q.A6 If you could live anywhere in the United States that you wanted to, would you prefer a city, a suburban area, a small town or a rural area?

| Jan 23-Feb 9 |  | (SDT) <br> Oct 3-19 |
| :---: | :--- | :---: |
| $\frac{2014}{24}$ | City | $\underline{2008}$ |
| 21 | Suburban area | 23 |
| 30 | Small town | 25 |
| 24 | Rural area | 30 |
| 2 | Don't know/Refused (VOL.) | 21 |

## NO QUESTION 7

## ASK ALL PHASE A:

Imagine for a moment that you are moving to another community.

## ASK ALL PHASE A:

Q.A8 Would you prefer to live in [INSERT ITEM; RANDOMIZE]?

## Jan 23-Feb 9

$\underline{2014}$
A community where the houses are larger and farther apart, but schools, stores, and restaurants are several miles away [OR]
A community where the houses are smaller and closer to each other, but schools, stores, and restaurants are within walking distance
Don't know/Refused (VOL.)

## ASK ALL PHASE A:

Q.A9 Still imagining that you are moving to another community. In deciding where to live, would each of the following be important, or not too important to you. First, would [INSERT ITEM;
RANDOMIZE] be important, or not too important? What about [NEXT ITEM]?
a. Living in a place where most people share your political views

Jan 23-Feb 9, 201428

## ASK ALL PHASE B:

Q.B12 Thinking about elected officials in Washington who share your positions on the most important issues facing the nation. [READ AND RANDOMIZE]

Feb 12-Feb 26
$\underline{2014}$
58
Should they work with elected officials they disagree with,
even if it results in some policies you don't like [OR]
Should they stand up for their positions,
even if that means little gets done in Washington
36
Don't know/Refused (VOL.)
NO QUESTIONS 13-24

## ASK ALL:

Q. 25 I'm going to read you some pairs of statements that will help us understand how you feel about a number of things. As I read each pair, tell me whether the FIRST statement or the SECOND statement comes closer to your own views - even if neither is exactly right. The first pair is [READ AND RANDOMIZE PAIRS BUT NOT STATEMENTS WITHIN EACH PAIR]. Next, [NEXT PAIR] [IF NECESSARY: "Which statement comes closer to your views, even if neither is exactly right?"]

## ASK ALL PHASE A:

Now a different kind of question,
Q.26F1/F2 Thinking about how Barack Obama and Republican leaders should address the most important issues facing the country. Imagine a scale from zero to 100 where 100 means [IF FORM 1: Republican leaders get everything they want and Obama gets nothing he wants, and zero means Obama gets everything and Republican leaders get nothing/IF FORM 2: Obama gets everything he wants and Republican leaders get nothing they want, and zero means Republican leaders get everything and Obama gets nothing.] Where on this scale from zero to 100 do you think they should end up? [OPEN END ENTER NUMBER 0-100] [IF NECESSARY: " [FORM 1: 100 means Republicans get everything they want, ZERO means Obama gets everything he wants/ FORM 2: 100 means Obama gets everything he wants, ZERO means Republicans gets everything they want], about where, from 0 to 100 should they end up?] [INTERVIEWER, IF RESPONDENT STRUGGLES WITH PRECISE NUMBER YOU CAN SAY: "you can just give me a number close to what you think"] [IF RESPONDENT SAYS A NUMBER BETWEEN [FORM 1: 0-49, FORM 2: 51-100] CLARIFY: "Just to be sure I get this right, [INSERT NUMBER CHOSEN], means Obama should get more than Republican leaders, is that what you meant?" [IF NO, RESPONDENT MEANT REP LEADERS SHOULD GET MORE: "A number between [FORM 1: 51 and 100, FORM 2: 0 and 49] would mean Republican leaders get more than Obama"] [IF RESPONDENT SAYS A NUMBER BETWEEN [FORM 1: 51-100, FORM 2: 0-49] CLARIFY: "Just to be sure I get this right, [INSERT NUMBER CHOSEN], means Republican leaders should get more than Obama, is that what you meant?" [IF NO, RESPONDENT MEANT OBAMA SHOULD GET MORE: "A number between [FORM 1: 0 and 49, FORM 2: 51 and 100] would mean Obama gets more than Republican leaders"]

|  | 41 | Some of my close friends share my views, but many do not <br> I don't really know what most of my close friends think about <br> government and politics |
| $*$ | 23 | $*$ |

NO QUESTIONS 45, 49-52
QUESTIONS 46-48, 53-60 HELD FOR FUTURE RELEASE

[^14]
[^0]:    Source: 2014 Political Polarization in the American Public
    Notes: Ideological consistency based on a scale of 10 political values questions (see Appendix A). Republicans include Republican-leaning independents; Democrats include Democratic-leaning independents (see Appendix B). Politically engaged are defined as those who are registered to vote, follow government and public affairs most of the time and say they vote always or nearly always.

[^1]:    Source: 2014 Political Polarization in the American Public
    Note: Republicans include Republican-leaning independents; Democrats include Democraticleaning independents (see Appendix B).
    PEW RESEARCH CENTER

[^2]:    Source: 2014 Political Polarization in the American Public
    Notes: "Don't know" responses not shown. Ideological consistency based on a scale of 10 political values questions (see Appendix A)
    PEW RESEARCH CENTER

[^3]:    ${ }^{1}$ When data collection for the 2014 Political Polarization and Typology Survey began, non-internet users were subsampled at a rate of $25 \%$, but a decision was made shortly thereafter to invite all non-internet users to join. In total, $83 \%$ of non-internet users were invited to join the panel.

[^4]:    1 In Feb 8-12, 2012 survey, question was asked as a stand-alone item.

[^5]:    2 Trends for January, 1992 and January, 1989 are based on general public.

[^6]:    4 In Jan 2-5, 2014 survey, item was worded: "Someone who is a 'born again' Christian." In Jan 2-5, 2014 survey, item was worded: "Someone who owns a gun."

[^7]:    6 In October, 2006 and earlier, both answer choices began: "Homosexuality is a way of life that should be..."

[^8]:    7 In January 2014 and earlier, response items were not randomized. In January 2013, question asked as a stand-alone item.

[^9]:    9
    Trend for comparison question is worded: "Do you think abortion should be legal in all cases, legal in most cases, illegal in most cases, or illegal in all cases," with the categories read in reverse order for half the sample.

[^10]:    11
    Q126a and Q126b asked in Phase A (Jan 23-Feb 9, 2014) only. Q126 data in this table is based only on interviews conducted in this period.

[^11]:    12 Item was asked Jan. 28-Mar 16, $2014(N=9,570)$. Party totals shown here may differ from PARTY because of this.

[^12]:    13 In Louisiana, a congressional primary election is not held.
    14 In Jan. 15-19, 2014 survey and earlier, question did not have the word "Congressional." In October 2013 and earlier, the fourth answer choice was "Seldom" instead of "Seldom or never."

[^13]:    16
    In the February 2-7, 2011, survey and before, question read "...do you strongly agree, agree, disagree or strongly disagree with the Tea Party movement..." In October 2010 and earlier, question was asked only of those who had heard or read a lot or a little about the Tea Party. In May 2010 through October 2010, it was described as: "the Tea Party movement that has been involved in campaigns and protests in the U.S. over the past year." In March 2010 it was described as "the Tea Party protests that have taken place in the U.S. over the past year."

[^14]:    17
    Question wording in this topline is that from the web version of the survey. For those questions asked on the phone, wording was adapted slightly so that it could be asked over the phone. Question wording for the phone version of the survey is available on request.
